Course Syllabus

Course: VNSG 2461 Clinical Level 3
Semester: Spring 2025
Clinical Days/Times: Wednesday and Thursday; Times vary by clinical site

Instructor: Brenda Knight, BSN RN
Office: AH 103 E
Office Hours: by appointment
Office Phone: 806-716-2202
Emails: bknight@southplainscollege.edu;

Facebook: https://www.facebook.com/SouthPlainsCollegeVocationalNursing

"South Plains College improves each student's life."

GENERAL COURSE INFORMATION

*It is the responsibility of each student to be familiar with the content and requirements listed in the course syllabus and SVN Handbook. * This syllabus should be placed at the front of the student handbook.

Prerequisite courses: VNSG 1160, 1460

CO-requisite courses (concurrent): VNSG 2410, 1334, 1219, 1331

COURSE DESCRIPTION

A method of instruction providing detailed education, training and work-based experience and direct patient/client care, generally at a clinical site. On-site clinical instruction, supervision, evaluation, and placement is the responsibility of college faculty. Clinical experiences are unpaid external learning experiences.

STUDENT LEARNING OUTCOMES

At the completion of the semester students will: (based on the Differentiated Essential Competencies of Texas Board of Nursing [DECS])
1. Become a Member of the Profession
2. Provider of Patient-Centered Care
3. Be a Patient Safety Advocate
4. Become a Member of the Health Care Team

COURSE OBJECTIVES - Outline form (C-5, C-6, C-7, C-8, C-15, C-16, C-17, C-18, C-19, C-20) (F-1, F-2, F-7, F-8, F-9, F-10, F-11, F-12)

At the completion of this course the student will:
• Apply the theory, concepts and skills involving specialized materials, equipment, procedures, regulations, laws, and interactions within and among political, economic, environmental, social, and legal systems associated with Vocational Nursing
• Demonstrate legal and ethical behavior
• Demonstrate the ability to care for multiple patients in multiple patient-care situations
• Demonstrate safety practices within the health care setting
• Demonstrate interpersonal teamwork skills
• Communicate in the applicable language of health care
• Be prepared to practice within the legal, ethical, and professional standards of vocational nursing as a health care team member in a variety of roles
• Exhibit an awareness of the changing roles of the nurse
• Utilize the nursing process as a basis for clinical judgment and action
• Accept responsibility for personal and professional growth
• Be present and punctual for all clinical assignments and lab with no more than 2 absences.

COURSE COMPETENCIES: To exit this course and graduate from the Vocational Nursing Program (VNP), the student must

- Have a 76 average grade AND
- Complete and turn in all required clinical paperwork. Students who fail to turn in work fail the clinical course regardless of other grades.
- Maintain CPR and immunizations AND
- Complete 90% of the skills checklist 4 weeks prior to graduation AND
- Complete at least one sterile procedure (Foley catheter and sterile dressing change) AND
- Have no more than two absences this semester AND
- Pass the Summative Evaluation AND
- Practice within the scope of practice for SVNs, demonstrating movement to the graduate level of practice and clinical judgment

EVALUATION METHODS

Weekly clinical performance evaluations, Paperwork/documentation evaluations, Clinical Judgment Process, and other assignments with a final Summative Evaluation at the end of the semester.

ACADEMIC INTEGRITY

It is the aim of the faculty of South Plains College to foster a spirit of complete honesty and a high standard of integrity. The attempt of any student to present as his or her own any work which he or she has not honestly performed is regarded by the faculty and administration as a most serious offense and renders the offender liable to serious consequences, possibly suspension.

Cheating - Dishonesty of any kind on examinations or on written assignments, illegal possession of examinations, the use of unauthorized notes during an examination, obtaining information during an examination from the textbook or from the examination paper of another student, assisting others to cheat, alteration of grade records, illegal entry or

unauthorized presence in the office are examples of cheating. Complete honesty is required of the student in the presentation of any and all phases of coursework. This applies to quizzes of whatever length, as well as final examinations, to daily reports and to term papers.

Plagiarism - Offering the work of another as one's own, without proper acknowledgment, is plagiarism; therefore, any student who fails to give credit for quotations or essentially identical expression of material taken from books, encyclopedias, magazines and other reference works, or from themes, reports, or other writings of a fellow student, is guilty of plagiarism.

VERIFICATION OF WORKPLACE COMPETENCIES

Successful completion of this course and all required concurrent theory courses entitles the student to receive a Certificate of Proficiency and to apply to write the examination for licensure (NCLEX-PN) to practice as a Licensed Vocational Nurse in the State of Texas.

BLACKBOARD

Blackboard is an e-Education platform designed to enable educational innovations everywhere by connecting people and technology. This educational tool will be used in this course throughout the semester as a reporting tool and communication tool. Please calculate your grade according to the criteria in this syllabus.

FACEBOOK

The Vocational Nursing Program has a Facebook page at https://www.facebook.com/SouthPlainsCollegeVocationalNursingProgram in addition to the South Plains College website; this Facebook page will be used to keep students up-to-date on program activities, South Plains College announcements and will help with program recruitment. "Liking" the South Plains College Vocational Nursing Program Facebook page is not mandatory, nor are personal Facebook accounts, in order to access this page.

SCANS and FOUNDATION SKILLS

Refer also to Course Objectives. Scans and Foundation Skills attached

SPECIFIC COURSE INFORMATION

LEVEL 3 CLINICAL OBJECTIVES: (Based on the TBON DECs)

During the clinical course, the competent vocational nursing student progresses to proficient graduate vocational nurse through the following:

I. Member of the Profession
The student vocational nurse who exhibits behaviors that reflect commitment to the growth and development of the role and function of nursing consistent with state and national regulations and with ethical and professional standards; aspires to improve the discipline of nursing and its contribution to society; and values self-assessment, self-care, and the need for lifelong learning.
A. Function within the nurse's legal scope of practice and in accordance with the policies and procedures of the employing health care institution or practice setting.
1. Function within a directed scope of practice of the vocational nurse with appropriate supervision.
2. Assist in determination of predictable health care needs of patients to provide individualized, goal-directed nursing care.

3. a. Practice according to facility policies and procedures and provide input in the development of facility policies and procedures.
b. Question orders, policies, and procedures that may not be in the patient's best interest.
B. Assume responsibility and accountability for the quality of nursing care provided to patients and their families.
1. Practice according to the Texas laws and regulations, agency policies and SPC policies.
2. a. Provide nursing care within the parameters of vocational nursing knowledge, scope of practice, education, experience, and ethical/ legal standards of care.
b. Participate in evaluation of care administered by the interdisciplinary health care team.
3. a. Practice nursing in a caring, nonjudgmental, nondiscriminatory manner.
b. Provide culturally sensitive health care to patients and their families.
c. Provide holistic care that addresses the needs of diverse individuals across the lifespan.
4.a. Use performance and self-evaluation processes to improve individual nursing practice and professional growth.
b. Evaluate the learning needs of self, peers, and others and intervene to assure quality of care.
5.a. Assume accountability for individual nursing practice.
b. Follow established evidence-based clinical practice guidelines.
6.a. Follow established policies and procedures.
b. Question orders, policies, and procedures that may not be in the patient's best interest.
c. Use nursing judgment to anticipate and prevent patient harm, including implementing Nursing Peer Review. invoking Safe Harbor.
7. Demonstrate professional characteristics that display a commitment to nursing care and to recognizing and meeting patient needs. Use communication techniques to maintain professional boundaries in the nurse/patient relationship.
8. Use communication techniques to maintain professional boundaries in the nurse/patient relationship.
9. Uphold professional behavior in nursing comportment and in following organizational standards and policies. Comply with professional appearance requirements according to organizational standards and policies.
10. Implement principles of quality improvement in collaboration with the health care team.
C. Contribute to activities that promote the development and practice of vocational nursing.
1. Identify historical evolution of nursing practice and issues affecting the development and practice of vocational nursing.
2. Work collegially with members of the interdisciplinary health care team.
3. Participate in activities individually or in groups through organizations that promote a positive image of the vocational nursing role.
4. Recognize roles of vocational nursing organizations, regulatory agencies, and organizational committees.
5. Practice within the vocational nursing role and Scope of Practice.
6. Serve as a positive role model for students, peers, and members of the interdisciplinary health care team.
D. Demonstrate responsibility for continued competence in nursing practice, and develop insight through reflection, self-analysis, self-care, and lifelong learning
1. Participate in educational activities to maintain/improve competency, knowledge, and skills.
**2. Participate in nursing continuing competency activities while within the program to prepare for licensure.*

3. Use self-evaluation, reflection, peer evaluation, and feedback to modify and improve practice.
4. Demonstrate accountability to reassess and establish new competency when changing practice areas.
5. Demonstrate commitment to the value of lifelong learning.
6. Engage in self-care practices that promote work-life balance.
II. Provider of Patient-Centered Care
The student vocational nurse who, based on educational preparation and scope of practice, accepts responsibility for the quality of nursing care and provides safe, compassionate nursing care using a systematic process of assessment, analysis, planning, intervention, and evaluation that focuses on the needs and preferences of patients and their families. The student vocational nurse incorporates professional values and ethical principles into nursing practice. The patients for SVNs (LVNs) individual patients and their families.
1. Use a problem-solving approach to make decisions regarding the care of assigned patients.
2.a. Organize care for assigned patients based upon problem-solving and identified priorities.
b. Proactively manage priorities in patient care and follow-up on clinical problems that warrant investigation with consideration of anticipated risks.
c. Recognize potential care needs of vulnerable patients
3. Identify and communicate patient physical and mental health care problems encountered in practice.
4. Apply relevant, current nursing practice journal articles to practice and clinical decisions.
B. Assist in determining the physical and mental health status, needs, and preferences influenced by culture, spirituality, ethnicity, identity, and social diversity of patients and their families, and in interpreting health-related data based on knowledge from the vocational nursing program of study. of culturally, ethnically, and socially diverse patients and their families based on interpretation of health-related data.
1. Use structured assessment tool to obtain patient history.
2. Perform focused assessment to assist in identifying health status and monitoring change in patients.
3. Report and document focused patient assessment data.
4. Identify predictable and multiple health needs of patients and recognize signs of decompensation.
5. Share observations that assist members of the health care team in meeting patient needs.
6. Assist with health screening.
7. Differentiate abnormal from normal health data of patients.
8. Recognize healthcare outcomes and report patient status.
9. a. Recognize that economic and family processes affect the health of patients.
b. Identify health risks related to social determinants of health
C. Report data to assist in the identification of problems and formulation of goals/ outcomes and patient-centered plans of care in collaboration with patients, their families, and the interdisciplinary health care team.
1. Integrate concepts from basic sciences and humanities to deliver safe and compassionate care in delivery of patient care.
2. Identify short-term goals and outcomes, select interventions considering cultural aspects, and establish priorities for care in collaboration with patients, their families, and the interdisciplinary team.
3. Participate in the development and modification of the nursing plan of care across the lifespan, Including end-of-life care.

4. Contribute to the plan of care by collaborating with interdisciplinary team members.
5. Assist in the discharge planning of selected patients.
6. Demonstrate fiscal accountability in providing patient care.
7. Demonstrate basic knowledge of disease prevention and health promotion in delivery of care to patients and their families.
D. Provide safe, compassionate, basic nursing care to assigned patients with predictable health care needs through a supervised, directed scope of practice.
1. Assume accountability and responsibility for nursing care through a directed scope of practice under the supervision of a registered nurse, advanced practice registered nurse, physician assistant, physician, podiatrist, or dentist using standards of care and aspects of professional character. professional values.
2.a. Identify priorities and make judgments concerning basic needs of multiple patients with predictable health care needs in order to organize care.
b. Manage multiple responsibilities.
c. Recognize changes in patient status.
d. Communicate changes in patient status to other providers.
3.a. Implement plans of care for multiple patients.
b. Collaborate with others to ensure that healthcare needs are met.
4. Participate in management activities.
E. Implement aspects of the plan of care within legal, ethical, and regulatory parameters and in consideration of patient factors.
1. Implement individualized plan of care to assist patients to meet basic physical and psychosocial needs.
2. Implement nursing interventions to promote health, rehabilitation, and implement nursing care for clients with chronic physical and mental health problems and disabilities.
3. Initiate interventions in rapidly changing and emergency patient situations.
4. Communicate accurately and completely and document responses of patients to prescription and nonprescription medications, treatments, and procedures to other health care professionals clearly and in a timely manner.
5. Foster coping mechanisms of patients and their families during alterations in health status and end of life.
6.a. Assist interdisciplinary health care team members with examinations and procedures.
b. Seek clarification as needed.
c. Provide accurate and pertinent communication when transferring patient care to another provider
7.a. Inform patient of Patient Bill of Rights.
b. Encourage active engagement of patients and their families in care.
8. Communicate ethical and legal concerns through established channels of communication.
9. Use basic therapeutic communication skills when interacting with patients, their families, and other professionals.
10. Apply current technology and informatics to enhance direct patient care while maintaining patient confidentiality and promoting safety.
11. Facilitate maintenance of patient confidentiality.
12.a. Demonstrate accountability by providing nursing interventions safely and effectively using a directed score of practice

b. Provide nursing interventions safely and effectively using established evidence-based practice guidelines.
13. Provide direct patient care in disease prevention and health promotion and/or restoration.
F. Identify and report alterations in patient responses to therapeutic interventions in comparison to expected outcomes.
1. Report changes in assessment data.
2. Use standard references to compare expected and achieved outcomes of nursing care.
3. Communicate reasons for deviations from plan of care to supervisory health care team member.
4. Assist in modifying plan of care.
5. Report and document patient’s responses to nursing interventions.
6. Assist in evaluating patient care delivery based on expected outcomes in plan of care and participate in revision of plan of care.
G. Implement teaching plans for patients and their families with common health problems and well-defined health learning needs.
1. Identify health-related learning needs of patients and their families.
2. Contribute to the development of an individualized teaching plan.
3. Implement aspects of an established teaching plan for patients and their families.
4. Assist in evaluation of learning outcomes using structured evaluation tools
5. Teach health promotion and maintenance and self-care to individuals from a designated teaching plan.
6. Provide the patient with the information needed to make choices regarding health
7. Provide patients and families with basic sources of health information.
H. Assist in the coordination of human, information, and physical materiel resources in providing care for assigned patients and their families.
1. Participate in implementing changes that lead to improvement in the work setting.
2.a. Report on unsafe patient care environment and equipment.
b. Report threatening or violent behavior in the workplace
3. Implement established cost containment measures in direct patient care.
4. Assign patient care activities taking patient safety into consideration according to the Texas Board of Nursing rules (217.11).
5. Use management skills to assign licensed and unlicensed personnel.
6. Assist with maintenance of standards of care.
III. Patient Safety Advocate
The student vocational nurse who promotes safety in the patient and family environment by: following scope and standards of nursing practice; practicing within the parameters of individual knowledge, skills, and abilities; identifying and reporting actual and potential unsafe practices; and implementing measures to prevent harm.
A. Demonstrate knowledge of the Texas Nursing Practice Act and the Texas Board of Nursing Rules that emphasize safety, as well as all federal, state, and local government and accreditation organization safety requirements and standards
1. Attain licensure through completion of these objectives in preparation to pass NCLEX and receive licensure
2. Practice according to Texas Nursing Practice Act and Texas Board of Nursing rules.

3. Seek assistance if practice requires behaviors or judgments outside of individual knowledge and expertise.

4. Use standards of nursing practice to provide and evaluate patient care.
5. Recognize and report unsafe practices and contribute to quality improvement processes.
6. Participate in peer review
B. Implement measures to promote quality and a safe environment for patients, self, and others.
1. Promote a safe, effective caring environment conducive to the optimal health, safety, and dignity of the patients and their families, the health care team, and others consistent with the principles of just culture.
2. Accurately identify patients
3.a. Safely perform preventive and therapeutic procedures and nursing measures including safe patient handling.
b. Safely administer medications and treatments.
4. Clarify any order or treatment regimen believed to be inaccurate, non-efficacious, contraindicated, or otherwise harmful to the patient.
5. Document and report reactions and untoward effects to medications, treatments, and procedures and clearly and accurately communicate the same to other health care professionals.
6. Report environmental and systems incidents and issues that affect quality and safety and promote a culture of safety.
7. Use evidence-based information to contribute to development of interdisciplinary policies and procedures related to a safe environment including safe disposal of medications and hazardous materials.
8. Implement measures to prevent the risk of patient harm resulting from errors and preventable occurrences.
9. Inform patients regarding their plans of care and encourage participation to ensure consistency and accuracy in their care.
C. Assist in the formulation of goals and outcomes to reduce patient risks.
1. Assist in the formulation of goals and outcomes to reduce patient risk of health care-associated infections
2.a. Implement measures to prevent exposure to infectious pathogens and communicable conditions.
b. Anticipate risk for the patient.
3. Implement established policies related to disease prevention and control.
D. Obtain instruction, supervision, or training as needed when implementing nursing procedures or practices.
1. Evaluate individual scope of practice and competency related to assigned task.
2. Seek orientation/ training for competency when encountering unfamiliar patient care situations.
3. Seek orientation/ training for competency when encountering new equipment and technology.
E. Comply with mandatory reporting requirements of the Texas Nursing Practice Act, SPC policies and agency policies.
1. Report unsafe practices of healthcare providers using appropriate channels of communication.
2. Understand nursing peer review rules Safe Harbor rules and implement when appropriate.
3. Report safety incidents and issues through the appropriate channels.
4. Implement established safety and risk management measures
*** F. Accept and make assignments that take into consideration patient safety and organizational policy.**

1. Accept only those assignments that fall within individual scope of practice based on experience and educational preparation.
** 2. When making assignments, ensure clear communication regarding other caregivers' levels of knowledge, skills, and abilities.*
** 3. When assigning nursing care, retain accountability and supervise personnel based on Texas Board of Nursing rules according to the setting to ensure patient safety.*
IV. Member of the Health Care Team:
The student vocational nurse who provides patient-centered care by collaborating, coordinating, and/ or facilitating comprehensive care with an interdisciplinary/multidisciplinary health care team to determine and implement best practices for the patients and their families.
A. Communicate and collaborate with patients, their families, and the interdisciplinary health care team to assist in the planning, delivery, and coordination of patient-centered care to assigned patients.
1. Involve patients and their families with other interdisciplinary health care team members in decisions about patient care across the lifespan.
2. Cooperate and communicate to assist in planning and delivering interdisciplinary health care.
3. Participate in evidence-based practice in development of patient care policy with the interdisciplinary team to promote care of patients and their families.
B. Participate as an advocate in activities that focus on improving the health care of patients and their families
1. Respect the privacy and dignity of the patient.
2. Identify unmet health needs of patients.
3. Act as an advocate for a patient's basic needs, including following established procedures for reporting and solving institutional care problems and chain of command.
4. Participate in quality improvement activities.
5. Refer patients and their families to community resources.
C. Participate in the identification of patient needs for referral to resources that facilitate continuity of care and ensure confidentiality.
1.a. Identify support systems for patients and their families.
b. Identify major community resources that can assist in meeting needs.
2.a. Communicate patient needs to the family and members of the health care team.
b. Maintain confidentiality according to HIPAA guidelines.
c. Promote system-wide verbal, written, and electronic confidentiality.
3.a. Advocate with other members of the interdisciplinary health care team on behalf of patients and families to procure resources for care.
b. Assist patients to communicate needs to their support systems and to other health care professionals.
4. Identify treatment modalities and costs of health care services for patients and their families.
D. Communicate patient data using technology to support decision making to improve patient care.
1.a. Identify, collect, process, and manage data in the delivery of patient care and in support of nursing practice and education.
b. Use recognized, credible sources of information, including internet sites.

c. Access, review, and use electronic data to support decision-making
2.a. Apply knowledge of facility regulations when accessing client records.
b. Protect confidentiality when using technology.
c. Intervene to protect patient confidentiality when violations occur.
3.a. Use current technology and informatics to enhance communication, support decision making, and promote improvement of patient care.
b. Advocate for availability of current technology.
4. Document electronic information accurately, completely, and in a timely manner.
E. Assign nursing care to other SVNs or unlicensed personnel based upon an analysis of patient or workplace unit need.
**1. Compare the needs of patients with knowledge, skills, and abilities of assistive and licensed personnel prior to making assignments.*
**2. a. Assign and monitor tasks of unlicensed and licensed personnel in compliance with the Texas Board of Nursing rules.*
b. Reassess adequacy of care provided.
**3. a. Document and/ or report responses to care or untoward effects.*
b. Provide feedback on competency levels of team members.
F. G.* ***Supervise nursing care provided by others for whom the nurse is responsible**.*
**1. Provide instruction where needed to members of the health care team to promote safe care.*
**2. Seek direction and clarification from supervisors when questions arise to promote safe care by health care team.*
**3. a. Oversee and monitor patient care provided by unlicensed assistive personnel and vocational licensed personnel as assigned.*
b. Base assignments on individual team member competencies.
**4. Ensure timely documentation by assigned health team members*
G. Assist health care teams during local or global health emergencies or pandemics to promote health and safety and prevent disease.
1. Recognize the impact and prepare to respond to an emergent global or local health issue in an assistant role
2. Guide patients, staff, and others in understanding the extent of the emergency and their response
3. Participate with the health care team to promote safety and maintain health during an emergency or pandemic
4. Include public health strategies in the care of individuals and communities that address resolution of a global or local crisis and promotion of health among the population.

SPECIFIC LEVEL 3 CLINICAL UNIT OBJECTIVES: See Objectives Posted on Blackboard for specific requirements

MEDICAL-SURGICAL/PEDIATRIC ROTATIONS

Clinical Days are Wednesday and Thursday

Clinical Rotations for the Spring 2025 semester will include the following sites:

- Covenant Hope 4-Observation/Tele
- Covenant Mercy 7-Palliative
- UMC-NICU
- Covenant-3 North Pedi
- Covenant Peace 4-cardiac/tele
- CCH-Surgery
- Pavillion-PEDI
- Faith 5-MICU
- CCH-PACU
- Covenant-Wound Care Center
- Covenant-Health Plus Clinic
- Covenant-2 Central-PICU
- Southwest Medical Park Clinic
- Covenant Peace 5-cardiac/tele
- Pediatric Clinics-TBA
- Other sites may be utilized as well

General Guidelines for ALL Medical Surgical Rotations in Level 3

Criteria	**Level 3**
Number of patients	3-5
Medication administration with instructor supervision	Yes
EMR documentation (MAR only during medication admin)	Yes
SPC Chart Pack	Yes
VS and brief assessment by 0730	Yes
Full assessment documented by 0930	Yes
Staple removal with instructor supervision	Yes
Foley Catheter insertion (initially with instructor) TPCN	Yes
Sterile Dressing change (initially with instructor) TPCN	Yes
Follow Do and Don't List	Yes

****other clinical facilities may be assigned during the semester as they become available to students. If this occurs, additional clinical objectives may be posted.**

Students MAY NOT bring course work to "study" during clinical rotations, complete clinical assignment paperwork (like care plans, case studies), research clinical information or other activities that distract from the clinical experience while on the units. Students should refrain from asking class questions of instructors during clinical time; instead, the student who has questions about class work should make an appointment with the appropriate class instructor for that discussion.

PEDIATRIC OBJECTIVES:

1. Demonstrates an awareness of safety factors applicable to the hospitalized child and initiates action to provide a safe environment for the client.
2. Demonstrates the ability to assess the needs of and implements a care plan to meet the needs of the hospitalized child, using measures to make the experience less threatening for the child.
3. Maintains the holistic nature of the ill or hospitalized child by recognizing the importance of play and diversion activity in his/her overall care plan.
4. Demonstrates an understanding of nutrition for the recovery and continued growth and development of the child client.
5. Recognizes the normal range of vital signs in the child as contrasted to those in the adult client.
6. Recognizes the normal growth and development for age, thereby identifying abnormal aspects relative to the total assessment of the child client.
7. Analyzes the parent-child relationship and implements nursing measures geared to strengthen and support the child, as well as the family.
8. Demonstrates knowledge of immunization schedule and aspects of preventative care.
9. Demonstrates accountability for own nursing practice.

GUIDELINES FOR PEDIATRIC ROTATION

STAY OUT OF THE BREAKROOM. Report to the Charge Nurse when arriving on the floor.

#1 Rule: DOUBLE check with TPC Nurse/Charge Nurse prior to performing a procedure, treatment or giving meds. An error with a child can quickly result in a poor client outcome.
#2 Rule: Children are usually allowed to sleep in the morning instead of being awakened early for vital signs unless otherwise ordered or if condition requires. Ask your TPC nurse when to take VS and do assessments.

1. Vital signs may be completed utilizing the Nurse on a Stick. Blood pressure is done only once daily. Check with the TPCN regarding if blood pressures are needed at every vital sign check.
2. Meds must be double checked by the TPC nurse. Follow Medication Administration Guidelines.
    a. The student may give oral or topical meds only. Topical meds may be applied with TPCN supervision; all other Med administration is supervised by the instructor. You must have your drug cards completed and with you to administer medications.
    b. Vaccinations may be administered to a patient >12 years of age with supervision.
3. Take three pediatric clients if available (less should only be taken if low census)
4. You will be assigned research on 2 patients at the end of day 1 and will present your research on day 2 of clinical.
5. Research will consist of a pediatric disease process map and a growth and development template.
6. The student should spend time with the client/family--find appropriate toys, diversion activities, etc. Identify if the child is meeting milestones for age.
7. If the unit is not busy, the student will ask the Charge Nurse what can be done around the floor (stocking, cleaning VS machines, etc.). IF there is nothing else to be done at that time, the student may work on or may study pediatrics ONLY. The student MAY NOT work on any other material or read magazines, newspapers, etc.

Bring your Nursing Skills checklist with you to your rotation.

Criteria	**Level 3**
Number of patients	3 (take 2 if census is low)
Medication administration with instructor supervision	PO only Yes
EMR documentation (only MAR with medication administration)	Yes
Chart Pack	Yes
VS and brief assessment by 0800	Yes
Full assessment documented by 0930	Yes
Staple removal with instructor supervision	Yes
Foley Catheter insertion (preferred with instructor) TPCN	No
Sterile Dressing change (preferred with instructor) TPCN	Yes
Follow Do and Don’t List	Yes

Guidelines for Medication Administration during Clinical Medication Administration

THE STUDENT WILL:

1. Be assigned a floor and be assigned medication administration by the faculty.
2. Obtain all information on the patient regarding diagnosis and medications for the first clinical day and prepare all diagnosis and medication cards for the patient and have everything prepared for the instructor on the second day.
3. Prepare drug sheet for the patient(s) that must include all active medications the patient is prescribed by the physician – scheduled meds, prn meds that the patient has had within the last three days, and IVPB medications.

Please Note: Information obtained from the Omnicell/PYXIS systems is incomplete and does not give the student enough information for safe drug administration; therefore, the student must have a completed drug sheet.

4. Be able to verbally tell the instructor and/or TPCN from memory or by reading drug sheet the following:
    a. medication name (trade and generic)
    b. classification
    c. effect (action)--reason patient is on medication (diagnosis)
    d. route ordered
    e. normal dose range for route ordered
    f. major common side effects (expect/report)
    g. nursing implications (V/S, lab, safety, etc.)
    h. patient teaching.

During Med Rotation; THE FIRST TIME THE STUDENT IS UNABLE TO GIVE THIS INFORMATION ON EACH MEDICATION FOR EACH ASSIGNED PATIENT, THE STUDENT WILL have points deducted from the clinical grade (This applies to incomplete/missing RX information as well) AND will be placed on PROBATION. A second infraction will result in dismissal from the program. This policy will carry over from medication rotation all the way through to graduation.

5. Find all orders for all medications to be administered and know where orders are in the patient(s) chart or on the computer.
6. Review medications with the instructor and then administer medications only under her supervision.
7. Follow hospital policies which state that SVNs may give medications by all routes **EXCEPT IV** with supervision by the instructor.
8. Complete all other aspects of patient care.
9. Students may NOT print drug card information from the clinical facilities; this is theft of hospital property.
10. Should the student not have four (4) days of medication administration during the Level II semester, the student will be put on probation in Level III and placed on Medical Surgical rotations until successfully completed.

MEDICATION ADMINISTRATION AFTER MED ROTATION

Medication Administration by Student Vocational Nurses after successful medication rotation

DECs: Member of a Profession, Provider of Patient-Centered Care, Patient Safety Advocate

POLICY: Student Vocational Nurses will administer medications following all guidelines and policies for safe effective administration of medications.

Definition of Supervision: Instructor reviews medications and escorts students to the patient room at all times. This includes scheduled and prn medication administration. [Please note: the OB floors are an exception to this policy and will be discussed thoroughly by the OB instructor.]

1. The student will follow the SPC/VNP and facility's policy and procedures on medication administration by the student vocational nurse.
2. The student will not pass medications without direct instructor supervision following hospital policy which states that the student vocational nurse may give medications by all routes EXCEPT IV (except on pediatrics where only oral and topical medications can be administered) with supervision by the instructor.
3. If the student has not administered a particular route and seeks the experience, the student must have complete medication information for that medication and call the instructor. The route will be documented on the Med/Surg checklist.
4. The student **must** have complete medication information prior to administering any medication. Failure to do so will result in disciplinary action. Students may administer herbal medicines and supplements with required information for which a written physician's order is on the chart and the pharmacy has supplied for the patient. Supplements from home are not to be given by SVNs.
5. The student will be able to administer medication in the following areas:

Short Stay	Post-Partum
Rehabilitation	Medical-Surgical Floors
Telemetry Floors **except Renal patients on Dialysis**	Long Term Care facilities

   Students may give meds to two or more patients.
6. Students should prepare to administer 0900 to 1500 medications (except IV) on the day shift.
7. Students should communicate with the TPCN and notify them that they will be administering medications with their instructor for that patient. Please ask the TPCN to pull the medications from the PYXIS/Omnicell.
8. The student will be responsible for all patient care for assigned patients.
9. If a medication error is made, after assuring patient safety, the student will immediately notify the TPC nurse and instructor. The TPC nurse or instructor will notify the physician of the error, and an investigative report will be completed.

   The Medication Administration Error Quotient will be completed by the instructor and appropriate student action taken. See the example of the Quotient Form IN THE STUDENT HANDBOOK.
10. The student must have a completed med sheet on all medications (Except PRN that have not been given in the last 3 days).
11. For new medication orders (orders written between nursing report and 0900):
    a. Look up the new medication in the drug book, review the information and mark the book.
    b. Give the medication per SPC policy following all nursing implications.
    c. Be prepared to show the instructor the new order and to discuss the new medication, including why it was ordered.

d. Complete the medication sheet and turn it in to the instructor the next classroom day.
e. Should the student fail to turn in the sheet on the following class day, the student will be subject to disciplinary action.
f. This process should be the **EXCEPTION**, rather than the rule, meaning that this should only happen on occasion and not daily or weekly! This will be monitored and the student who consistently has to "look up" drugs will be subject to disciplinary action.

SHOULD A STUDENT ADMINISTER MEDICATIONS WITHOUT *INSTRUCTOR* SUPERVISION, THE STUDENT WILL BE PLACED ON PROBATION. A SECOND INFRACTION WILL RESULT IN THE STUDENT BEING WITHDRAWN FROM THE VOCATIONAL NURSING PROGRAM FOR UNSAFE PRACTICE. This policy is followed all the way through graduation!

THE SIMULATION EXPERIENCE

PURPOSE: Simulation is a "strategy—not a technology— to mirror, anticipate, or amplify real situations with guided experiences in a fully interactive way." (http://www.ahrq.gov/)

When assigned, students will participate in simulated nursing care scenarios at the Center for Clinical Excellence located in Building 1 at the Reese Center. Refer to the Student Handbook for specific guidelines for this facility.
Students can expect the following from simulation:

- The opportunity for independent critical-thinking decision-making and delegation
- The opportunity to make and learn from mistakes
- The opportunity for deliberate nursing practice
- The opportunity for immediate feedback
- The opportunity to participate in experiential learning

During Simulation, students fulfill all roles of the nurse and are not restricted to student limitations. Students must treat the simulation experience as a REAL patient situation; if appropriate action is not taken by the student, the patient will experience a negative outcome, including "death". On a rotating basis, students will be assigned roles for each scenario. All roles are important, and all students have learning opportunities in any role.

RESEARCH: Students must be prepared for the simulation. Student prep materials are found on Black Board and should be reviewed before the Simulation experience begins. Students are required to prepare for the clinical experience through review of materials, preparation of Dx, RX, procedure cards and other information that will be used during the experience. **Students who are unprepared for the simulation experience due to lack of preparation may be sent home, accruing an absence.**

DEBRIEFING: occurs after the simulation concludes. During debriefing, the scenario is discussed, and the student's nursing actions/decisions are examined. This is a great time for self-reflection. All students should participate in the debriefing process. Confidentiality is a must and students cannot share information with other classmates. **A Breach of Confidentiality in simulation is grounds for dismissal from the VNP.** While observing the scenario, students maintain a plus/delta sheet which allows the student to experientially learn and provide valuable feedback.

SIMULATION EVALUATION: Students will be evaluated during the experience. Adherence to SPC and CCE policies (including dress code), participating in the experience, adhering to safe nursing practice principles and competency of previously learned skills are part of the evaluation. Additionally, students reflect on their own learning through the reflection tool found on Blackboard.

SIMULATION ATTIRE: Students must be in full clinical uniform, including stethoscope, penlight, scissors, SBAR, Chart Pack, Dx and Rx cards. If you do not have these items, you are considered out of dress code. ONLY Pencils may be used in the simulation rooms.

SIMULATION ATTENDANCE: This is a clinical experience. Full attendance is expected. Students who must be absent for any reason must follow call in guidelines by emailing **ALL** instructors by 0700; after 0700, the student is classified as a "No Show." Students are absent at 0800—**THERE ARE NO TARDIES**—this experience is already later than hospital experiences, so there is no reason to be late. Students must clock in with their student ID upon entrance to CCE.
LUNCH: The instructor will assign a lunch break during the day. You may bring your lunch or you may leave the campus for lunch depending on the assigned time. You must be on time after lunch, or you will be counted absent. If you return late from lunch, you are sent home absent for the day.

DO NOT BRING CELL PHONE INTO THE BUILDING!! Leave it in your car! In addition, there are to be no tablets, computers, or other electronics in the building unless told by an instructor on an individual basis.

TEXT AND MATERIALS

Students should use current resources from theory textbooks such as the Williams & Hopper, Davis Drug Guide, etc. as tools to equip them for patient care. Websites that the student may use should end in ".org" ".gov" or ".edu." Wiki websites are not acceptable; neither are WebMD or Mayo Clinic [these websites are designed for laypeople—not professionals!]
Students are required to have the following items with them for the clinical experience:

- This syllabus
- Specific Unit Objectives that are not included in this syllabus
- Davis Drug Guide

ADDITIONAL CLINICAL ITEMS

Students should come to clinicals with all required research, chart pack or clinic notes. The student must be in full clinical uniform which includes the student badge, stethoscope, blood pressure cuff, penlight, bandage scissors, black ink pen and analog watch. Refer to the Student Handbook for the full-dress code

ATTENDANCE POLICY (*READ CAREFULLY)

Clinical Attendance

Clinical experiences allow the student to apply the theory of nursing to practice. Students are expected to attend all assigned clinical experiences, including Simulation, Clinical Judgment Experiences, and any assigned lab. The student may be administratively withdrawn from the course when absences become excessive as defined in the course syllabus.

Recognizing that sometimes students are ill or have ill children or have some other real reason to be absent, students may have two absences this semester—this includes any day the student is sent home from clinical for a rule violation. (see Student Handbook) **Any absence** will require a make-up to complete the required clinical hours; **absences** must be made up by the end of the semester. Because students cannot be evaluated if they are absent, points are deducted from the weekly clinical grade and replaced after make-up clinical***. Exceeding allowable clinical absences constitutes failure in the clinical course***.

Absences are recorded for the entire day. A student who leaves before the end of the clinical period is marked as "absent" for the entire day. Since most nursing work is done in the morning, students may not come into the clinical setting in the afternoon.
Simulation is considered a clinical experience. An absence in simulation is the same as for all other clinical experiences. Students cannot be absent from the clinical unit in the morning and then come to simulation in the afternoon.
At times, students will be required to drive from the clinical site to campus and back during the clinical experience and should anticipate the need to drive back and forth.

Students who show up at the wrong facility will be counted as absent for the day. Students should verify their schedule prior to clinical and make sure they understand the clinical assignment.

Absences in Short Rotations:

Maternal-child (L&D, PP, NSY or NIC), Pediatrics (PICU, PER or CCC) and medication administration rotations have limited clinical availability. Should there not be enough time or space to repeat this full clinical experience, the student will fail the clinical course. Absences in the medication administration rotation must be made up and the rotation will be extended as the clinical schedule allows. The student in a medication administration rotation making up absences loses external clinical experience.

How to Decide if you are Too Sick to Attend Clinical (verify with HCP note): Students should not come to the clinical setting for the following reasons:

* Fever > 100.4º F
* Conjunctivitis (Pink Eye)
* Diarrhea lasting more than 12 hours
* Group A Strep-culture confirmed or physician diagnosis
* Jaundice—yellowing of the skin which might suggest viral hepatitis
* Cold Sores (herpes) that are weeping, open (not crusted over)
* Active measles, mumps, pertussis, rubella, chicken pox or shingles
* Upper respiratory infection (cold) with productive cough (green or yellow sputum) * Tuberculosis and/or positive TB skin test
* Head lice
* Scabies (mites that burrow under the skin causing a rash)
* Any draining wound such as an abscess or boil
* Impetigo
* Mononucleosis

Students who come to clinical contagious are sent home absent.

Students are officially enrolled in all courses for which they pay tuition and fees at the time of registration. Should a student, for any reason, delay in reporting to a class after official enrollment, absences will be attributed to the student from the first class meeting.

Students who enroll in a course but have "Never Attended" by the official census date, as reported by the faculty member, will be administratively dropped by the Office of Admissions and Records. A student who does not meet the attendance requirements of a class as stated in the course syllabus and does not officially withdraw from that course by the official census date of the semester, may be administratively withdrawn from that course and receive a grade of "X" or "F" as determined by the instructor. Instructors are responsible for clearly stating their administrative drop policy in the course syllabus, and it is the student's responsibility to be aware of that policy.

It is the student's responsibility to verify administrative drops for excessive absences through MySPC using his or her student online account. If it is determined that a student is awarded financial aid for a class or classes in which the student never attended or participated, the financial aid award will be adjusted in accordance with the classes in which the student did attend/participate, and the student will owe any balance resulting from the adjustment.

(http://catalog.southplainscollege.edu/content.php?catoid=47&navoid=1229#Class_Attendance)

LUNCH—the lunch break in the hospital setting is 30 minutes; this begins when the student reports off care of the patient until the time the student returns and resumes care. If the student spends 10 minutes waiting on the elevator, the student has 20 minutes remaining on the lunch break.

In some outpatient settings, the student may be given an hour for lunch IF there were no meetings during the noon hour which would give the student an additional learning experience (see each clinic objective). A student who takes excessive lunches or who leaves the site when there is a meeting during the noon hour will receive full disciplinary action and possible dismissal for unprofessional conduct.

NOTE ABOUT CLINIC TIMES—some clinics may finish their work early and staff may tell the student he/she can leave early. THIS DOES NOT MEAN you can leave. Please contact your instructor and request instructions for the rest of the scheduled time; many times, the student may be moved to another site for additional experience. To "assume" it is okay to leave the clinical setting results in an absence assigned for that day. If this absence causes the student to fail, the student will fail the clinical course, regardless of other clinical grades.

Time sheets are required at off-hospital rotations. Students who misrepresent themselves on the time sheet or forge a time sheet are deemed "unprofessional" and are dismissed from the program for unprofessional conduct (please refer to the Student Handbook).

NO SHOW POLICY

Professional behavior requires the student to call when he/she will be absent. When absent on a clinical day, the student must email the clinical instructor before the specified deadline. STUDENTS MUST EMAIL PRIOR TO THE SHIFT FOR THE ABSENCE TO NOT COUNT AS A 'NO SHOW"—ONCE THE SHIFT STARTS, IT IS A "NO SHOW" (so at 0645, the student is No Show if there has not been a call-in). Just not showing up is unprofessional and is detrimental to patient safety. No Shows apply to the entire clinical year as they would in employment; if a student has a No Show in the previous semester, it still is a part of the record and subsequent No Shows will be labeled as #2 or #3, depending on the actual number.

CONSEQUENCES of No Show:

1. Failure to email correctly by 0644 to report an absence results in being classified as NO SHOW.
2. The absence will have to be made up as with any other clinical absence; however, the grade for the missed day will remain the same (no points awarded for the NO SHOW.)

Hospital Clinical Times: (must be present BEFORE the "Absent at" time; students are absent on the given time. Students must meet the clinical instructor at 0630 before going to the assigned unit. The clinical instructor will ensure that the student is in dress code and prepared for the clinical day. A student that is found to be unprepared will be sent home absent if unable to immediately correct the issue on site.

Clinical time is "on the job" learning. Students are expected to be up and working throughout the entire shift. Students MAY NOT leave the assigned hospital unit until 3:15 hospital time. This means that the student gives a report, checks on the patients, and participates in patient care until 3:15 and then gathers belongings and leaves the floor.

Outpatient Clinics Clinical Times: (must be signed in exactly at the START time in the outpatient clinics which means you must arrive at least 5 minutes early). **TIME SHEET REQUIRED FOR EACH CLINIC** turned in with your Clinic Packs to your instructor.

OUTPATIENT CLINIC INFORMATION:

Clinic	Hours	Contact/Phone No	Absent at	Lunch	Parking	Required Research PRIOR to rotation
Covenant Health Plus, 7601 Quaker	0800-1600	Sherry Marston 725-9408	0800	Approx. 1 hr. (based on pt. load); may eat out	Outside parameter on N or S sides; come in through front door	Antibiotic Med List Hormone Med List Immunization Med List See Clinic Requirements in the Objectives posted on Blackboard
Covenant Wound Care Center 4000 22nd Place, suite 100	0800-1600	Jessika Fuss 806-725-7081	0800	Approx. 1 hr. (based on pt. load); may eat out	Do not park in closest parking spaces	See Clinic Requirements in the Objectives posted on Blackboard
TTUHSC Clinics @ Pavilion, 3601 4th ST (see below for specific info)	0800-1600	743-4263 ask for unit mgr.; IT Help: 7431815	0800	Approx. 1 hr. (based on pt. load); may eat out	See parking pass	See each clinic's requirement on TTUHSC Objectives on Blackboard

Cell Phones in the Clinical Setting

Cell phones are prohibited at any time during the clinical experience and may not be used in any location of the clinical setting during clinical hours. Students should not have cell phones on their person, in their back packs, pockets or other personal areas during clinicals. Cell phones should be left in the student vehicle or left at home.
Students who violate this policy and have their cell phone out during the clinical day or on their person *for any reason* will receive a zero for the day, no matter when the incident occurs. In addition, any other forms of electronics, including but not limited to, Apple watches, IPADS, and laptop computers are not allowed in any clinical setting.

Simulation is a clinical experience; this policy applies to simulation as

Clinical Affiliate Approval

Clinical affiliates have a right to deny clinical experiences to students based on that facility's policies and procedures.

1. If a student is a former employee of a facility and ineligible for rehire, that student may not be able to perform clinical rotations at that facility.
2. Should alternative experiences not be available, the student must withdraw from the VNP.
3. Clinical facilities may also request in writing, a denial. Should a student be denied clinical experiences at a particular affiliate, the faculty will look for alternative experiences within the program's current affiliations. However, should a student be prohibited from a major facility in which BON required experiences occur, the student cannot meet the program objectives and must withdraw.
4. Clinical facilities may request student information prior to allowing students to participate in clinical experiences. At a minimum, the student's name and SPC student ID is shared with facilities for clearance with their IT systems. Other information may be requested.

Clinical Probation

POLICY: During each clinical rotation, an instructor will evaluate the student.

PROCESS: The instructor will complete a weekly clinical evaluation so that the student has many opportunities to improve performance.

1. Should a student have difficulty improving, that student may be placed on clinical probation.
2. A student who has not completed clinical paperwork may be placed on probation.
3. A student who has not completed the skills checklist may be placed on probation.
4. At the end of each clinical level, the summative evaluation tool will be completed by the Clinical Instructor.
5. The student on clinical probation who does not meet the clinical objectives will be withdrawn from the nursing program.
6. Students on probation at the beginning of Level III do not have off campus rotations.
7. The student who does not meet Level III objectives will not graduate from the VNP.

CONFIDENTIALITY/HIPAA

Student Vocational Nurses will not divulge any protected patient information, clinical instructional information, or instructor-student conference information.

In the Vocational Nurse's Pledge, we pledge:

> "I will not reveal any confidential information that may come to my knowledge in the course of my work." This statement makes it clear that any information gained by the nurse during examination, treatment, observation or conversation with the client or his/her family is confidential. Unless the nurse is authorized by the client to disclose the information or is ordered by a court to do so, she/he has a clear moral obligation to keep the information confidential.

The nurse may use the knowledge to improve the quality of client care, but she/he never shares information about the client with anyone not involved with his/her care. The student will direct all inquiries directly to the charge nurse.

Even when sharing with caregivers, the nurse must be extremely cautious. The information is not discussed in the cafeteria or around people not involved with the patient's care. Students must be aware of confidentiality and be careful with whom and where they discuss their assignments.

The Health Insurance Portability and Accountability Act (HIPAA) became effective April 14, 2003, for all health care providers in the United States. HIPAA established regulations for the use and disclosure of Protected Health Information (PHI). PHI is **any** information held by a covered entity which concerns health status, provision of health care, or payment for health care that can be linked to an individual. This means that NO information about a patient may be shared outside of those health care providers that "need to know" the information to properly care for the patient. Violation of HIPAA is a federal violation and is grounds for dismissal from the nurse program. This includes any information about a health care facility or individuals providing health care at a specific facility.

Students must always be aware of the confidential information they have about patients and must protect that information. Even if a specific name is not mentioned, a violation can exist if there is enough information for other individuals to "connect the dots" and find out who the information is about. Students must be extremely cautious in discussing PHI – elevators, cafeterias, and even open nursing stations may be inappropriate places to discuss information.

<u>All social networking sites are inappropriate</u> areas to discuss patient information. This includes Facebook, Instagram, Snap Chat, TikTok, Twitter, etc. HIPAA violations could also occur through email or other computer programs. Students who post inappropriate information or PHI on social media are dismissed from the program.

Students should only share PHI with their instructors for the purpose of learning and with the other health care providers on the assigned unit who are participating in that individual patient's care. It is inappropriate to discuss situations with other classmates, family members, etc.

Students must also protect all student paperwork and should not leave these out where anyone can read it. Students should always secure any identifying information when leaving that information (do not leave information at the nursing station, in patient rooms, etc.) ALWAYS LOG OFF a computer system if you have used it!

Confidentiality also extends to the nursing report, facility in-services or other hospital/clinic meetings the student nurse attends.

Failure to maintain confidentiality is grounds for dismissal.

Additionally, confidentiality is to be maintained in all program situations including classroom discussions, student/instructor conferences and disciplinary actions. Student grades and clinical evaluations are confidential also.

Simulation scenarios should not be discussed with other classmates outside the group assigned for a simulation. Sharing information is CHEATING and is a violation of confidentiality.

Failure to maintain confidentiality is grounds for dismissal. In observance of confidentiality, students who have family members or friends in the hospital MAY NOT review their charts or take them as patients. Family members who want to review documentation should follow the established hospital protocol.
Students who violate confidentiality in this manner will be withdrawn from the VNP.

Students agree to protect confidentiality in the Student Contract at the end of this manual. A separate Confidentiality Agreement is required by some clinical affiliates prior to participating in clinical experiences at those facilities.

Contacting the Clinical Instructor

Instructors often rotate between floors for student instruction. The clinical instructor is the student's BEST clinical resource and should be contacted by the student ANY TIME the student has a clinical question or concern. Should the instructor be on another floor, the student should do the following to contact the instructor:

1. Obtain instructor's contact number from the clinical schedule.
2. Using a phone at the nurse's station, dial the instructor's contact number.
3. The instructor may be with another student or assisting another student with a procedure; please leave a brief but detailed message and your contact number. The instructor will call you back as soon as possible.
4. **STAY BY THE PHONE!!!** If you must leave, be sure you have a classmate wait for your return call; the staff are not responsible for making sure your message is delivered.
5. If you do not receive a return phone call within 10 minutes, please call again. The instructor may be supervising a procedure and may not be able to call right away.

When Students Should Contact the Clinical Instructor:

The clinical instructor should be contacted:

1. When there is a personnel issue on the clinical unit.
2. When there is a patient care issue on the clinical unit.
3. Any time a patient refuses an essential element of care, such as a bed bath or assessment.
4. When there is any patient or student-related incident.
5. For all sterile procedures.

Dress Code for Clinical Experiences

Looking professional is an obligation a nurse has for the patient; a well-groomed nurse inspires confidence to patients and staff. Students are expected to follow the clinical dress code ANY time students are in clinical uniform for any clinical situation.

1. Uniform:
   a. White scrub top, pants or knee-length, A-line skirt. All tops must have "SPC" embroidered logo.
   b. Must have appropriate underwear with the uniform. Bras and underpants are required for females. Underpants are required for males. White socks or white hose are required and must go at least halfway up to the knee. Underwear may NOT have writing on them that shows through the scrub top/bottom. Women wearing skirts must wear a slip and white hose. Bras should be skin colored and should not be visible through the neck of the clinical uniform.
   c. The uniform must be clean and pressed (ironed). Wrinkled uniforms look unprofessional and may result in the student being sent home absent. To avoid ironing, remove uniforms immediately from the dryer and hang the uniform up. There are commercial sprays you can use to help remove wrinkles as well.
   d. The uniform must be worn to the hospital or other health care facility each clinical day, even during specialty rotations. This rule also applies to any special events such as honor lunches or breakfasts. If a student is at a rotation where street clothes are allowed, such as day care, the student MUST dress in the clinical uniform when participating in ANY school event.
   e. A closed-toe, closed-heel, and leather or leather like white shoe should be worn in ALL clinical settings, including day care. Athletic shoes that are mostly white may be worn. Shoestrings must match the shoe color and be clean. Shoes should be cleaned/polished regularly. Crocs and clogs or any other plastic shoes are unsafe and unacceptable.

f. A white jacket may be worn (optional). If worn, it must have the "SPC" embroidered logo. It must be clean and pressed DAILY. Cold-natured students should purchase this item. Other jackets and coats—even during lunch—may not be worn with the student uniform. (Be advised that there is limited space to hang coats/jackets during the winter months. Expensive coats should not be worn to the hospital where they could be stolen)
g. A white t-shirt may be worn under the scrub top for warmth. White is the only acceptable color. A t-shirt, if worn, must be cleaned daily and must have no writing that shows through the scrub top. T-shirts must be tucked in and not hanging out under the uniform
h. IF a uniform is too little (as purchased) or IF it becomes too small so that it rides up over the buttocks, the student is sent home "absent" and cannot return to the clinical setting until a new uniform that fits correctly is purchased.

2. Sweaters must not be worn with the uniform.
3. No jewelry may be worn when in uniform other than a watch with a second hand {SMART watches are prohibited} and one flat WEDDING BAND without stones. Stones in rings may be damaged or may injure a patient. No body areas may be jeweled, including earrings, and tongue, nose, eyebrow, or chin studs. Plastic spacers may be worn if they are clear and flush with the skin. *Jewelry policy applies even if they are covered when wearing a mask.
4. No pins or other decorations may be worn on the uniform, except those approved by the faculty.
5. Tattoos:
    - Facial tattoos must not be visible. If a student has a facial tattoo, it must be covered with dermablend or another brand of tattoo concealer.
    - Tattoos on the upper extremities down to the wrist must be covered with clothing (Scrub undershirt in white) or bandages.
    - Tattoos in other areas may be left uncovered (hands, wrist, neck, chest, behind the ears) unless the words or images convey profanity, violence, discrimination, sexually explicit content or anything deemed offensive by fellow students, instructors, faculty, patients, patient family or hospital staff.
6. Hair must be kept clean, washed frequently, neatly arranged, and professional in appearance.
    a. Extreme coiffures (bushy, mohawks, extreme shavings, pompadours or other hairstyles determined by faculty as extreme) are inappropriate with the uniform. Extreme hair colors (blue, pink, bright orange, purple, green, gold, silver, maroon, bright yellow or glitter, or those that call attention to self) are not allowed.
    b. Long hair must be worn in a neat and confined bun (NO MESSY BUNS). Swinging ponytails are not allowed. Long hair extensions must also be worn in a bun.
    c. No loose bangs, tendrils and/or wings or braids are permitted. If hair falls forward when bending over, it must be secured away from the face and shoulders. A thin headband the same color as student hair may be worn. Long bangs should be pinned back.
    d. Decorative items such as ribbons, flowers, combs, barrettes, headbands, bandanas, head scarves, head-dress of any kind, beads, feathers, or "fad" items etc. must not be worn in the hair while in uniform. *Plain claw hair clamps may be worn by students to hold long hair back. These claw hair clips can only be in the following colors: white, black, clear, or the student's own natural hair color.*
    e. Head scarves/coverings or Hijabs worn for religious purposes must be a neutral color and may not have adornments on them.
    f. Ponytail holders must be white, royal blue, or the student's own natural hair color.
    g. Sideburns, beards and mustaches must be neatly trimmed and/or according to hospital policy.
    h. The above guidelines and specific clinical affiliate grooming policies will be adhered to during the time the student is in uniform, including touring off-campus facilities.

6. Nail polish (even clear) may NOT be worn with the uniform because polish of any kind can harbor infectious microorganisms.
    a. Fingernails must be clean and well-shaped.
    b. Fingernails must be kept filed to the edges of the fingers to eliminate the danger of scratching or injuring the patient or self.
    c. NO artificial/sculptured nails may be worn.
7. Scented body powder, cologne, toilet water, aftershave lotion, perfume and hairspray may not be worn while on duty. Even pleasant scents can cause vomiting for a nauseous patient.
8. Personal and oral hygiene are a must for the nurse. Deodorant and antiperspirant must be used daily and must be sufficient to control personal body odors. Teeth should be brushed. No bejeweled teeth. Daily bathing is a must. Certain foods, such as garlic, curry, etc. may cause the body to have a peculiar odor and consumption of these foods may require more frequent bathing and washing of the uniform. Please be cautious when consuming these foods.
9. Make-up will be worn with discretion. No false eyelashes are allowed.
10. NO chewing gum is allowed. Breath mints may be consumed after meals.
11. No tobacco products are allowed during the clinical setting.
12. The student badge must be visible above the waist always. No decorative badge holders other than the "SPC" badge holder may be worn. The ID badge must be worn always when in a clinical rotation; students without badges are sent home, accruing absences. The PICTURE must always be visible.
13. The student badge and/or clinical uniform signifies that a student is a nurse or a student at SPC and must be worn with critical thought when the student is out in public. Sports bars, pubs or any place where the behavior could be questioned are inappropriate places to wear the student uniform for the following reasons:
    a. Once identified as a nurse or nursing student, the individual becomes *obligated* to provide emergency care at that location should it be necessary. The student is held *legally liable* for all care rendered during this situation. Additionally, a student who has imbibed alcohol, even only one drink, could be charged with practicing nursing while under the influence. Drinking alcohol when in uniform is grounds for immediate termination.
    b. The SPC VN logo is a professional standard, and the public expectations of nurses conflict with the expectation of a person at a bar, even if the student is not partaking of alcohol beverages (guilt by association.) This situation can render the student susceptible to complaint and public humiliation.

c. Students who wear SPC insignia inappropriately or in a compromising situation (i.e. drinking alcohol) are dismissed from the VNP.

ASSIGNMENT POLICY—CLINICAL PREPARATION

All assignments must be completed by the assigned due date/time. Late work must be turned in despite the student receiving a zero. Incomplete or incorrect work will result in a deduction per the evaluation rubric.

It is the responsibility of the student to be informed of class progress and assignments and come to clinical prepared to participate in patient care, to turn in any assignments due, and/or take the quiz or test scheduled for that day. Students may be required to write Care Plans and Case Studies or complete virtual simulations as part of the clinical experience.

Clinical Preparation

Each student is expected to prepare for clinical practice in such a way that makes the student a safe, effective care giver. Not understanding the disease process and the expected care is equal to unsafe nursing practice. Preparing for clinical practice is a DUTY of the student vocational nurse and leads to SAFE NURSING PRACTICE. The student must prepare for clinical to understand the medical diagnoses and medications, the implications of labs and diagnostics, the potential complications and how to prevent them, and the required nursing care. **Adequate preparation is necessary**. The student should plan on a *minimum* of two hours of prep time per day for each clinical experience

Medical Surgical Unit Requirements:

1. Utilize Computer Checklist.
2. Upon arriving to the Unit, allow charge nurse to assign TPCN. Provide note to TPCN, choose patients (2-3} patients)
3. First day of clinicals: **After *assessment and AM care is completed and documented***, the student may access the patient's medical record for approximately **30 minutes** to gather information. This information should include
    a. Patient's medical and surgical history
    b. Current diagnoses
    c. Medications
    d. Labs and Diagnostics
4. Prior to leaving for the day, the student may verify with the instructor what information is important for research. **NO RESEARCH IS TO BE DONE ON THE UNIT!**
5. After clinical clock-out, the student should begin the preparation process so there is enough time to research and organize the student's prepared work.
6. The student should organize the information and be ready to present the information to the instructor. If any patient has been discharged, the student may still discuss the current information.

Research Requirements:

1. For each patient, the student must complete the ISBAR, pages 1 & 2 (assessment and narrative), and flowsheet.
2. On the primary patient, the student must complete the medication sheet and lab list as well and gather information to complete the clinical care map for research.
3. The student will demonstrate understanding of the patient's diagnosis(es) through knowledgeable discussion of the diagnosis, risk factors, s/s, treatments, nursing interventions, rationales, and patient teaching.
    a. In addition to the clinical concept map, the student may add written information in any form the student chooses, i.e., diagnosis sheets or diagnosis cards
    b. Students are encouraged to have this information written so when the student becomes nervous, there is a reference for the student to use during discussion; however, a written pathophysiology form is not required *if* the student can discuss the information in a logical, organized, reasonable manner.
    c. Students unable to discuss this information will receive a clinical deduction and may be instructed to have written information on subsequent clinical experiences.
4. The student will demonstrate understanding of the patient's medications through knowledgeable discussion of the medication, its action, its indication, the dosage and times of administration, possible side effects/adverse reactions, and applicable nursing interventions and patient teaching.
    a. The Medication List is to be thoroughly completed for the primary patient. There is a deduction for any incomplete Med List
    b. Students unable to discuss the medications will receive a clinical deduction and may be instructed to write additional information on medications.
    c. For students with poor discussion of medications or for an incomplete med list, med administration may be forfeited, with additional point deductions.
5. The student will demonstrate an understanding of the patient's laboratory values through discussion of the lab results, the normal values, the abnormal values, and the indicators of the lab values.
    a. The Lab Sheet is to be completed for the primary patient.
    b. Students who are unable to discuss the laboratory values will receive a clinical deduction and may be instructed to do additional written work on labs.
    c. There is a deduction for incomplete lab data.
6. Clinical Care Map:

Place the following on the Clinical Care map to present to the clinical instructor on the second clinical day:

- All current diagnoses (including history of chronic diseases)
- Medications (write the medications by the disease they are treating)

- Labs (write the labs by the disease they apply to)
- Plan of Care: List 3 priority nursing interventions for the primary diagnosis and 1 nursing intervention for each co-morbidity (every other disease process on the map). These must be patient specific as this should guide the student's care of that patient on the second clinical day.

b. The Clinical Care Map must be turned in on Monday after the clinical experience, by 0900. The student will need to have all corrections and any additional requirements from the clinical instructor completed on the map. The student should also include the patient teaching section. Please follow the instructions for the Clinical Care Map posted on Blackboard.

c. Clinical Care Map grades will be graded per the paperwork/documentation evaluation

IF PATIENTS are dismissed prior to 2pm on Day 1, the student is expected to pick a new patient and begin the research process again.
IF PATIENTS are dismissed after 3:15pm on Day 1, the student is expected to pick new patients upon arrival to the unit on Day 2 and complete an ISBAR, assessment, and flowsheet for the new patients on Day 2. The student must provide care during the clinical day but is not required to complete clinical research on the new patients that evening.
IF PATIENTS are dismissed after 10am on Day 2, the student is expected to assist the TPCN and fellow classmates with patient care.

CHART PACK:

In all medical-surgical rotations, the student must complete individual research and the chart pack. The Chart Pack is the student's practice documentation and is considered a legal document (it may be subpoenaed for evidence); therefore, the Chart Pack should be treated with respect and completed up to when the student relinquishes care of the patient. If the completed chart pack(s) are not turned in by the deadline, a deduction of 25 points will be taken from that clinical grade, with a 20 point deduction each day thereafter. Additional points may be taken if the documentation is incomplete.

Instructions for Completing the Chart Pack

Documentation of patient care is an integral part of care and is a necessary skill for the student to develop. Student Nurse Documentation is one way that the student demonstrates clinical judgment/critical thinking! It also has legal implications. The student must make every effort to provide thorough and effective documentation throughout the shift and must complete the documentation on the student worksheets.

Remember: Your chart pack is your form of patient documentation and is considered a LEGAL document; therefore, you should treat your Chart Pack as a legal document. ONLY black ink should be used to document, and you must complete all documentation. All writing must be legible. You should store your papers in a secure place at home.

1. Each patient should have the ISBAR completed, because this is your communication tool. You use one (1) ISBAR for each patient for all dates of care. There is room in the "assessment" area to write in your report information or you may use the back of the page. [If you must get a new patient, you need a new ISBAR]. THE ISBAR MUST BE VALIDATED BY THE INSTRUCTOR.
    a. Write your name in the Introduction area.
    b. In the R area, you should identify immediate nursing concerns for this patient and you identify/start discharge planning. Both should have more documentation in your nursing narrative.
2. From Blackboard, print the "chart pack;" you will need a new chart pack each day for each patient.
3. Assessment Page 1: print your name, patient initials, room number and date of the assessment across the top. At the bottom of the page is a place to document the time of the assessment. This format is a CHECKLIST of important assessment areas. It is to help you remember what to assess and then to document the assessment.

You should complete it at the bedside. KEEP IT NEAT! **Make sure to use appropriate NICU Assessment page.

a. Go through each assessment area, placing a check mark (√) in all areas that apply to this patient and completing all blanks as necessary as you complete your patient assessment—**BE WARY OF THE TEMPTATION TO COPY FROM DAY-TO-DAY! This is unprofessional, illegal, and unethical.**
b. If your patient has diabetic checks (accudatas), be sure to get that information for breakfast) on your assessment page. If that check is covered by insulin, be sure and document that. YOU SHOULD ALWAYS KNOW YOUR PATIENT'S LATEST BLOOD SUGAR (diabetic patients). Also, be sure to inspect the diabetic patient's feet daily.
c. Be sure that you document your initial safety check on the checklist. You will also document this in your FLOW SHEET, but this is your FIRST check.
d. Under skin, describe the color—using descriptive terms but not "NORMAL FOR RACE" or a similar statement. Actually, describe the color.
e. Be sure under "musculoskeletal" that you appropriately mark the pulses on the stick figure.
f. Some areas indicate that they must be described in the narrative.
g. ANY unusual finding should be marked with an asterisk* and then detailed in the narrative. This is a patient problem.
h. The Braden scale should be done on each patient, using your scale to make that determination. (You will no longer complete a Braden scale worksheet on each patient). Write in the Braden Score.

4. Assessment Page 2: Print your name, patient initials, room number and date across the top. There is a Narrative charting checklist provided for you at the top of the page to remind you of what you should include. This is the NARRATIVE NOTE. "Narrative" means story—this is the story of the patient that you will write for the day. You must write in BLACK ink and your writing MUST BE LEGIBLE! Please note the following basic rules:
    a. This is considered "legal"—your records could be subpoenaed, so remember that when you document! ONLY factual information should be put in the patient's record.
    b. Writing must be clear. Correct spelling and punctuation are essential! Misspelled words could be used to indicate poor nursing care!
    c. This story is about THE PATIENT. Therefore, the *subject understood* of each sentence is "the patient" unless you change the subject. You do not need to write "the patient" every time—it is acceptable to start the sentence with the verb, realizing that "the patient" could be placed in front of the verb.
        i. You must be cautious with this—if you fail to change the subject of the sentence, it could be read and interpreted as if the patient were doing his/her own care. For example, if you write "gave bed bath," it legally reads "the patient gave bed bath"—as if the patient gave his own bed bath. To write this, you would change the subject to "bed bath" and then you would write "bed bath given." Now, it clearly reads that you were the one giving the bed bath.
        ii. Because this story is about the patient, you NEVER use personal pronouns in your narrative "I" "me" "we" . . . it is NOT about you. It is about the patient, the care given to the patient, and the patient's response to that care!
        iii. If you document care that is given by others, use their name and credential as much as possible so that it is clear who the care giver was. "TPCN" may be easy for you to write but is unclear in the documentation.
    d. NEVER cross out, white out, erase or use any other method to remove an error. If there is an error made in the charting, use ONE line to cross through the error, and place your initials above that line [follow this same rule for all papers written in the VNP]. Any attempt to obliterate documentation indicates that something is being hidden. Do not write the word "error" anywhere on the chart—this could be used against you in a court of law, indicating nursing errors

e. If you forget to document something that you did at an earlier time, write in the current time that you remembered, and then in the narrative write "Late entry for _______(the time you took action), then complete the documentation. *Eventually as a licensed nurse, you will document on a computer which automatically times each entry—therefore, it is important that you correctly learn to write a late entry.*
f. Your student paperwork is CONFIDENTIAL. Always be aware of where you leave your papers. For all your student paperwork, please identify your patient by initials. Do not leave your papers out where anyone can read them.
g. Be FACTUAL—only document what you observe or do or what the patient tells you, using direct quotes if necessary. Do not make a judgmental statement, but instead describe the behavior. For example, do not write "patient is angry." Instead describing the behavior "yelling, cursing, and throwing urinal at staff" is more specific and allows the reader to determine the patient's state of mind. You could even quote the patient's yells or curses to give a more accurate picture of the patient.
h. Use only APPROVED abbreviations. The national trend is to use fewer and fewer abbreviations so that there is clarity in the documentation.
i. The left column is the Time column. Please write—in military time—each time you are noting the care given. At the first entry, write the date also. The right column is where you write your notes.
j. NEVER leave blank spaces in the narrative chart. Always draw a single line through any empty space to prevent subsequent entries from being made in your documentation by another person.
k. To begin your documentation, "open" your chart.
    i. The OPENING statement should include the following:
        1. report was received
        2. care was assumed
        3. of the patient by sex and age
        4. the diagnosis and the physician—this shows that you are taking care of the patient and that you know who the patient is and why they are there.
    ii. The next statement should be how you found the patient when you first went into the patient room. Is the patient (in bed? What position was the patient in? Was the patient breathing? Is the patient safe?)
        1. *Position:* chickens "lay", and people "lie" [lying]—patients in bed are in a position: supine, prone, left lateral, right lateral, high-fowler etc. Do not say "the patient was laying in bed" or "lying in bed"!
        2. *Breathing:* the patient should be breathing! You need to note that you saw that their respirations were present, regular, etc.
            i. You cannot say the patient is "sleeping"—how do you know they are sleeping? The only way to know for sure is if you wake the patient up.
            ii. Their eyes may be closed. This is what you observe. This is why you document their breathing.
            iii. Other items that must be described
        3. Describe what safety features are present.
        4. Pain—rating on a scale, location, intensity, duration
            a. What is done about the pain
            b. Follow-up—did whatever was done about the pain, change the pain?
        5. Wounds—must be described, including location, dressings, care, etc.
        6. IV/INT: the IV/INT site, dressing, condition should be described. If it is an IV, the solution, rate, amount should also be described. This is for primary solutions, not IVPBs. You must know the difference.

iii. Asterisk items from assessment page must also be described in narrative and what was done about those items.

iv. Any unusual assessments or specific nursing actions should be addressed in the narrative. The narrative should show care was given to the patient and the patient's needs were addressed. If the patient doesn't need nursing care, why is she/he still here?

v. IF A PATIENT ***REFUSES*** any care, it must be documented

The REFUSAL must also be reported to the TPCN and the instructor WHO WILL VERIFY THE REFUSAL. Document your reporting the refusal in the chart: *"Refused bath; refusal reported to TPCN Candy and Instructor Knight."*

vi. If the patient leaves the unit for any reason, the reason should be documented, how he/she left and with whom. The time returning to the unit should also be documented, along with a quick assessment to make sure the patient is okay. *"To x-ray via w/c accompanied by transportation assistant. Returned to room, assist to bed; resp even and reg. denies needs at this time."*

vii. Who is with the patient? Do they have needs? Questions?

viii. Discharge Planning: discharge planning begins on admission; what needs are identified? How can those needs be met? What resources might the patient need?

ix. Ambulation: how far did the patient walk? Did the patient use equipment? How many nurses had to assist? What type of assistance? What therapy? "*Ambulate 20 feet to nurses station and back. Up to chair, call light within reach, overbed table at chairside."*

x. "Close" the chart at the end of the shift. The closing statement should indicate the report about the patient was given to another nurse and care for that patient was relinquished to the nurse. The narrative must be signed by your LEGAL signature, your first initial, last name, nursing credential "SVN SPC." The signature must be legible.

5. Page 3: FLOW SHEET—This is your every 2-hour documentation!
    a. ALL **bold face** items must be documented every 2 hours throughout the shift:
        i. Pt position: what position is the patient in: B (back), R (right side) L (left side) P (prone), is the patient independent in turning = I. If the patient gets up to the chair = U; if the patient dangles on the bedside, "D." Write in the appropriate letter every 2 hours. If something happens not listed here, write this in the narrative.
        ii. Check arm band and allergy band every 2 hours and initial. If there is a change or loss, write this in the narrative.
        iii. What position is the bed in? Use the arrows to indicate this. If something unusual happens with the bed, write this in the narrative.
        iv. Where is the call light? Initial you have checked its availability every two hours. If something happens unusual, write it in the narrative.
        v. Are the bed brakes locked? Initial every two hours you know the brakes are locked. If something unusual happens, write it in the narrative.
        vi. Are the siderails up at the head of the bed? Initial you have checked every two hours. If there is something unusual happening or if the lower rails are also raised, write this in the narrative, explaining why the lower rails are raised. You also need to narrate more information about assisting the patient out of bed or other safety measures if the lower rails are up.
        vii. The IV/INT site should be inspected at least every 2 hours. You should note if it is Clean (C), Dry (D) and intact (I). You should write CDI each time it is checked. If the IV infiltrates or other problems develop, those should be noted in the narrative. If the IV is DC'd or restarted, it

should be documented in the narrative.

viii. Oxygen therapy should be noted via the device (write in the blank) and the liter flow. Initial each time it is checked. If the oxygen is DC'd or changed, it should be noted in the narrative. You should also note how the change in order has affected the patient's respiratory function.

ix. Initial every time the Incentive Spirometer (IS) is used by the patient. If the patient is not using IS, leave this area blank. If the patient is having respiratory issues, you should evaluate the need for IS.

x. Initial every time you have the patient TCDB. If the patient's care does not require TCDB, leave this blank. If the patient is having respiratory issues or has had any anesthesia, or if the patient is having respiratory issues, nurses should automatically introduce TCDB to the patient.

xi. Are there family present? Indicate the number of family members present by writing in the number. Specific family questions, requests, or problems should be documented in the narrative.

xii. Is toileting offered? This is especially important for patients with mobility or voiding problems and should be offered. Note the offer with your initials. If there are issues with toileting, these should be described in the narrative. If the patient is independent in toileting, leave this area blank.

b Routine AM Care:

i. Write in the type of bath the patient takes. Initial when this occurs. If the patient refuses a bath, this should be (1) reported to TPCN, (2) reported to instructor, and (3) documented in the narrative with the explanation of why the bath was refused.

ii. Initial the time when the following are done: oral care, skin care, peri care, Foley care, linen change, ROM exercises and when TED/AE or PP are on. If the patient is independent in these activities or if the patient does not have a Foley, TED/AE, or PP, leave those blank. If the dependent patient refuses an area of care, this should be documented in the narrative.

c. INTAKE and OUTPUT:

i. INTAKE: Record the patient's intake for the day. Be sure you note the difference between an IV solution and IVPBs! At 2 p.m. (1400), you should total all the day's intake in each category, then add them all together for the grand total intake. You should be concerned if the patient has NO intake all day! In addition to getting a total and documenting it, you should report the intake to your TPCN when you relinquish care.

ii. OUTPUT: write in output in each category for the time throughout the day. *An output that is less than 30 mL an hour MUST BE IMMMEDIATELY reported to the TPCN/CN! This is an emergency*. You should be concerned if there is no output! At the end of the day, total each category, then total all categories for the grand total. In addition to documenting the output, you should report the output to the TPCN when you relinquish care.

d. Vital Signs—record the vital signs and the time. If frequent VS are required (like a post-op patient), there is space to write them. *Any abnormal VS should be discussed in the narrative, along with what was done about the abnormality. As a reminder to you, if there are extremes, there are reminders that these need to be reported IMMEDIATELY*. IF the patient has an elevated temperature, you must check the WBCs and document them.

e. Glasgow Score should be completed on all neuro patients or on patients that have an order for neuro checks. *Routine med-surg patients usually do not need this*.

f. Nutrition: Write in the diet ordered, then record the percentage consumed for each meal. If the patient has a snack during the day, this should be documented in the narrative. If the patient refuses to eat, (1) report and (2) document this in the narrative. Also write in the narrative what else was offered

to the patient in the way of nutrition.

g. For diabetic patients, record the AC lunch accudatas and amount of insulin given. You should always be aware of your patient's blood sugar. If there is an unusual occurrence, document this in the narrative.
h. INCISIONS, WOUNDS, Pressure ULCERS: for each wound, please write in the location (i.e., midline Abd), the type of wound (i.e., surgical, pressure) a brief description and the dressing type—can use OTA if the wound is open to air. If there are more than 4 wounds or great drainage or dehiscence, etc., describe this in the narrative and the care given.

LEVEL 2 AND LEVEL 3:

6. Medication Form: **AFTER** you have completed your a.m. care, go to the patient's medical record, and list your medications on this form. You should include the dose, the route, the frequency, and the times the medication is to be administered. a. Wednesday NIGHT RESEARCH:
    i. Write in both the GENERIC and TRADE name of the medication
    ii. Therapeutic Class and Drug Class: find this in the drug book: *classification* of each medication
    iii. How it works: Look at *Action* in the drug book.
    iv. Why is YOUR pt taking it? Write the *indication* for THIS patient— "My patient is taking this because. . ." Many times, the patient takes medication for a different reason than its classification. An example is Aspirin. Aspirin is classified as an antipyretic or pain reliever. However, for an adult, 81 mg or 325 mg dose will not do either of those things. In this case, the patient is taking this as an antiplatelet/anticoagulant, NOT for fever. KNOW THE REASON!
    v. Why is this medication usually given: Look at *indications* in the drug book.
    vi. Pt Dose: Write in the ordered dose (noting if this is a correct dose when you research) and the route; Also complete the Normal Dose Range
    vii. Pt. Route: PO, IM, IV, etc.; also Possible Routes
    viii. Times: Write in the frequency of the medication AND the time— "daily" is not a time—not all meds ordered daily are at 0900, so you must write in the time the medication is to be administered.
    ix. Side Effects: Identify 3 major *side effects* or adverse reactions. If you write a comprehensive term like *Steven Johnson Syndrome* you better be able to explain what that is.
    x. Nursing considerations: Identify 3 (can include labs, VS needed prior to administering this medication (Look at Nursing Implications and Implementation in Drug Book)
    xi. Patient Teaching: 3 things to teach your patient about this med.
    xii. Citation: Correctly cite the drug book with page number.
    xiii. Write therapeutic level, antidote, and max dose in 24hrs as applicable. Include the onset and peak for all insulin

    b. Review your medications and think about the relationship to the diagnosis, the expected effect of the medication and how each works in the body so that you can effectively discuss these on the second clinical day with your instructor.
7. LAB DATA: **AFTER** you have completed your a.m. care, go to the patient's medical record, and pull up lab and diagnostic information. You should write in all labs from the date of admission, then current labs for dates of care. **PLEASE NOTE:** agency values may be slightly different based on each agency's equipment. If the agency calls something "abnormal" and its value is a little different, please go with the agency determination
    a. ROUTINE LABS: There are some labs that all patients have, and these are listed on the lab sheet, along with "normal" adult values as found in Van Leeuwen & Bladh, 2019. Highlight in YELLOW all abnormal labs for this patient.

b. RESEARCH: The first clinical night (then note any changes on the second day clinical night), research why the patient's values are abnormal—you are looking for REASONS, not diagnoses.
c. PATIENT SPECIFIC LABS: there are blank spaces in the lab form for you to use to write labs that are specific to this patient. There is a suggestion box to use to help you think about what to look for. There is also a table in the back of your lab manual that has labs listed by diagnoses you can use to help you. THIS AREA SHOWS YOUR CRITICAL THINKING when you determine the lab is important to your patient and write it down or when you determine a lab is needed and request it to be ordered! Students who either cannot recognize important labs and have them written or who want to skip this will find deductions taken from the clinical evaluation!
    i. Patient specific labs that are abnormal should also be highlighted in YELLOW
    ii. Patient specific labs should also be placed on the clinical care map by the appropriate diagnosis/medication (signify why the lab was drawn and its significance)
d. Students are expected to discuss all labs as part of the student discussion with instructors.

8. Look at diagnostic studies (x-rays, etc.). Write in the dates they were ordered, and the "impression" from the radiologist under patient results. Determine why you think these were ordered; also place in appropriate place on CCM (clinical care map)
9. Turn in your completed chart pack(s) and map as directed by your clinical instructor NO LATER THAN 0900 the next Monday. The instructor will evaluate your completed documentation. It should all be complete. Incomplete chart packs will result in additional points deducted from the paperwork/documentation evaluation. Once the chart packs have been reviewed, they will be placed in a pick-up location for you to retrieve your patient information to keep for your personal records.

Additional points may be taken from the clinical grade if work is incomplete.

A student who is going to be absent on the following Monday MUST email the clinical instructor prior to 0900 to report that the chart pack/clinic note is not going to be turned in Monday by 0900 due to illness. On the first day back in class, the Chart Pack/clinic note must be turned in; failure to notify the instructor OR failure to turn in the chart pack/clinic note upon the return to school will result in a deduction on the paperwork/documentation evaluation.

A delay in a didactic course for the day DOES NOT PROHIBIT meeting the 0900 Monday deadline (in other words, if a theory class is delayed by an instructor for some reason, the expectation will still be that the Chart Pack is turned in by 0900 Monday)

Guidelines for Writing a Narrative Note in the Vocational Nursing Program

Although modern technology has done away with much of the written head-to-toe assessment in actual patient documentation, the ability to put such an assessment together with clarity and detail enhances a student vocational nurse's critical thinking about the patient assessment process.

The following guidelines are to be used in writing the narrative note.

General Writing Rules:

1. Write on one side of the Narrative Note only. If you need more than one sheet of paper, continue writing on a second sheet, not on the back.
2. Handwriting must be legible—if it cannot be read, it has no value.
3. Treat this work as a LEGAL document—this means that it could be used in a court of law. Your Chart Pack could be subpoenaed.
4. This writing is about the patient. The focus is the patient and how the patient is, what the patient needs, does, wants, etc. The nurse's signature indicates the nurse is the one providing the care unless the nurse indicates in the writing that someone else provided care. If a sentence starts with a verb, the subject *understood* is the patient.

   Example: Gave bed bath. Reported pain. *These legally read "The patient gave bed bath. The patient reported pain."*

   a. If the subject of the sentence is not the patient, the subject should be clearly identified.

      Example: Bed bath given. (Bed Bath is the subject). Pain reported to TPCN. (Pain is the subject of that sentence).

   b. Personal pronouns, *I, we, me, you, us*, should not be used in the narrative assessment.
   c. What the student thinks, feels, does, is not important in this writing except to write what happens to the patient because of the care given.
5. The date and time must initiate the writing, flush left of the page.
   a. Each new entry should have the time
   b. Military time should be used; therefore, no colon should be used in between the hour and minutes.

      Example:

      Incorrect: 07:10 Report received; care assumed. . ..

      Correct: 0710 Report received; care assumed. . ..

   c. If a new page is started, re-write the date and time and continue with that entry.
6. At the end of an entry, the student's first initial of the student's *legal* name and the full last name, along with the credential "SVN, SPC" must accompany the entry.
   a. If the entire note is written as one entry, only the last line must be signed.
   b. If the entry ends at the end of a page, sign off that entry on that page. Sign off the last entry on the new page.
7. If an entry ends midway through a line, line out the rest of the line to prevent someone else from coming after and writing in additional words.
8. If an error is made in writing, place one line through the error and write the student initials above the line, then continue with the writing. If there is not room to write the correction, place a line through the entire sentence and re-write the entire sentence.
   a. DO NOT blacken out the writing—this indicates something to hide
   b. DO NOT use white out—again, indicates something to hide
   c. DO NOT write over—besides being sloppy, this indicates something to hide
9. Punctuation must be used. Periods must end sentences; commas must separate clauses.

10. This is written in narrative style, meaning a story. Therefore, you do not write a section, colon and then describe. You write the whole section as a story.

Example:

Incorrect: Eyes: PERRLA. Ears: clear. Skin: warm and dry.

Correct: PERRLA. Ears clear. Skin warm and dry.

11. Use only approved abbreviations in this writing. The ampersand "&" is **NOT** an approved abbreviation for "and."
12. Spelling is important. You must be able to spell words, especially common words!
    a. Most common errors include the use of "i" and "e" such as in receive.
    "I" before "e" except when it comes after "c" or when it sounds like "a" as in "neighbor" or "weigh." b. The patient has *bowel* sounds, not *bowl* sounds.

Specific Writing Criteria:

1. The documentation needs to be "opened" or started with the initial opening statement that tells (a) how the nurse took over care, (b) identifies who the patient is and why the patient is there, and (c) tells how the nurse first found the patient.
   Example:
   0700 Report received and care assumed of a 74-year-old male with diabetes, (L) BKA, weakness for Dr. Rabbit, supine in bed with eyes closed, respirations even and regular. *N. Nurse, SVN.*
   In this example, "report" and "care" are the subjects that start this sentence. The age is given to identify the patient, the diagnoses, and physician. The patient was apparently sleeping, as indicated by stating that the eyes were closed, and the respirations were even and regular (as opposed to dead with no respirations). The statement would have been incorrect to say "sleeping" because the only way to be sure the patient was asleep would be to wake the patient up.
2. The patient's position should be clear. People "lie", and chickens "lay"—patients are in positions: supine, left or right lateral, Fowler, prone, etc.
3. Complete Vital Signs should be written because they are "vital" to the patient.
4. Orientation should be specific—to say "x 3" is incorrect because there are many questions that could be asked to determine orientation.
   a. The correct word is "oriented." **Orient** as a verb means to "find direction" or "give direction." The noun form of this kind of orienting is **orientation.**
   b. Sometimes people in their speech will form an imagined verb from **orientation** and say **orientate** or make it a verb as **orientated.** At best, **orientate** is a back-formation used humorously to make the speaker sound pompous.
   c. The correct word is the verb **orient.**
5. Describe what you see. Don't say "natural" or "normal" for skin color—unless you have seen the patient prior to the hospitalization, how do you know what is natural or normal?
6. Avoid using the word "normal"—who determines "normal"? Instead use the descriptive terms
   a. Lung sounds are clear, adventitious, wheezes, rhonchi, rales, congested
   b. Bowel sounds are present, normoactive, hypoactive, hyperactive, absent
   c. Skin is pink, brown, tan, pale, or ruddy.
7. If the patient says something that is important to document, use quotation marks to show that that information came directly from the patient.
8. Don't assume—if you find the patient on the floor, describe it but don't assume the patient fell (they have been known to deliberately get on the floor). Don't assume there is a bruise because of an injection.

9. Intravenous (IV) access can be through a peripheral vein such as those found in the arms or legs, a subclavian vein, or a jugular vein. In most instances on a med-surg floor, the access is peripherally, usually in the lower arms. IVs can be continuous, meaning that they usually have 500-1000 mL bag of solution running continuously throughout care, OR IV access can be *intermittent,* meaning that the vein has an IV port, but solutions do not run all the time—usually for about 30 minutes several times a day for medications, only. Documentation of the IV access must be clear. For a CONTINUOUS IV, termed as "IV," there should be documentation of the solution, the amount, the rate, the pump being used (or if it is by gravity), and the site of the IV access with the access site described as to location, condition, and dressing. Intermittent access is termed "INT." For the INT, the site should be described as to location, condition, and dressing. When either is DC'd, the description of the removal and of the site should be included, as well as the dressing applied, and instructions given to the patient about the DC.
10. If there is an *abnormal* condition or assessment, describe it and include what nursing actions were taken, including who was notified about the abnormality. If the patient reports pain, do not just document the pain. You must also document who you reported the pain to and what was done about it. The documentation should also indicate that you verified pain relief. If there is abnormal skin turgor, you must also include who was informed about it. If the IV infiltrates or develops phlebitis, you should document that it was DC'd (and by whom if it was not you), if it was restarted, and what was done about the injured vessel.
11. Describe wounds and/or dressings. Do not just say there is a wound present.
12. Decubitus prone areas—the back, the buttocks, the heels—should be specifically addressed.
13. If a Foley catheter is present, the size and type of catheter, as well as the amount and color of urine should be clearly indicated. If the Foley is connected to a Continuous Drainage Unit (CDU), that must be stated. The location of the CDU should be stated as well to show that the safety of the catheter was maintained.
14. Safety is a major issue in the hospital. All safety care should be noted in the documentation: ID bands, safety bands, allergy bands, restraint devices, side rails, call light, bed position, brakes, and any alarms. Sitters should be noted if they are part of the safety device. If family members have been instructed to not leave the patient alone, family must be noted as part of the safety information.

Remember: the information that is documented must be RELEVANT to patient care. Social conversations, TV shows, political/social views & opinions are ONLY relevant if they impact patient care! What YOU think, feel, believe, etc. is NOT relevant to this documentation. Your documentation should reflect the focus of nursing care—what patient problems you are doing something about!

Organization and Specific Information

1. Head-mentation, orientation, communication, following instructions, eyes, ears, nose, throat, JVD, swallowing, etc.
2. Chest-includes heart and lung sounds, apical pulse, respiratory effort, chest symmetry.
    - Lung sounds-bilaterally, anterior, posterior, laterally. You may choose to listen to the posterior sounds when the patient is turned for the posterior assessment, but you will still write them with the other lung sounds. Remember there are 5 lobes, not 4 quadrants.
    - The respiratory effort must be noted as part of the assessment of the chest
    - While cardiologists and more advanced nurses assess all the heart sounds, our

program only requires you assess S1, S2, and the apical pulse rate.

3. Abdomen-listen for bowel sounds in all quadrants. Do not use both the word four and quadrant. It is redundant. Bowel sounds are either normoactive, hypoactive, hyperactive, or absent. You also assess the softness and condition of the abdomen. Inquire of the last BM and the characteristics.

4. Extremities-includes skin condition, turgor, capillary refill (both upper and lower extremities), pulses bilaterally, strength test, movement, etc.

5. Perineum-you may not always assess the peri area of the patient has no problems and is a legally consenting adult. You may simply inquire if the patient is having any problems and document that way. Inquire about voiding: color, amount, etc. If the patient has a urinary catheter, you should assess the area. Likewise, if there are any problems, you will need to assess the area.

6. Back-Once the patient rolls over you can assess the back, buttocks, and heels. You may also listen to posterior lung sounds and note any problems in this area.

Clinic Required Research

<u>To prepare for the Outpatient Clinics: Clinic</u> rotations are senior-level rotations in which the student functions in a more independent role under the supervision of the clinical instructor and clinic nursing staff. Students on probation do not participate in off-campus rotations.

General rules:

1. Students may be assigned to a clinic more than one time during the semester; some clinics may not be available to every student
2. Each clinic has specific requirements of preparation that the student MUST do PRIOR to the rotation. Please see the table below.
3. Each clinic will require the following daily, both of which should be turned in to the clinical instructor by 0900 the following Monday
   a. Clinic Note
   b. Med Log (if no meds are administered, please write “No meds administered” and submit)
   c. Med Sheet from chart pack completely filled out for that clinic
   d. Diagnosis Sheets as indicated by the clinic objective
   e. Completed time sheet
4. Each student will submit a signed time sheet for the clinic rotation turned to the clinical instructor.
5. Additional clinical deductions will be given for failure to turn in the documents completed on time.
6. Students who are placed on probation will forfeit all further clinic rotations so greater instructor supervision is available to assist the unprobated student
7. Students at the clinics must follow all SPC guidelines.

Students in the clinics work with all staff including nurses and physicians in providing outpatient care. Students should anticipate that they will assist staff with calling patients back, taking vital signs, completing focused assessments, assisting with procedures, removing sutures (nurse supervision), administering medications (nurse supervision- WITH approval from faculty), completing fingerstick blood sugars and Coumadin checks (nurse supervision), as well as assisting

with all phases of nursing care. Students must always have complete medication information before administering any medication and follow all SPC policies and guidelines.

Clinic	Required Research PRIOR to rotation
Family Medicine	Med sheets for: Antibiotics, Vitamins, Depo drugs, Immunizations (child & adult), Pain, Diuretics, Antiemetics Childhood diseases Diagnosis Sheets: Chickenpox, Measles, Mumps, Rubella, RSV,
Internal Medicine	Med sheets for Pain, Antihistamine, Antihypertensives, Immunizations, Insulin, Steroids, Antianginals, Medrols, antibiotics
OB-GYN	Med sheets for Hormones, Immunizations, Antibiotics Childhood Diseases Diagnosis Sheets: Chickenpox, Measles, Mumps, Rubella, RSV,
PEDI	Med sheets for Pain, Respiratory, Antibiotics, Immunizations, Steroids Childhood disease Diagnosis Sheets: Chickenpox, Measles, Mumps, Rubella, RSV,
Urology	Med sheets for Antibiotics, Hormones, antineoplastics
Orthopedics	Med sheets for Antibiotics, Steroids, pain
Ear, Nose & Throat	
Pedi Subspecialty*	
Pedi Surgery*	
Cardiology	Meds sheets for antihypertensives, Diuretics

You will also need your patient information, diagnoses, medications, and labs.

Instructions for Student Clinic Notes for ALL CLINICS

During each CLINIC rotation, the student is expected to follow the specific objectives and assist the nursing staff in caring for patients of the clinic. Instructions:

1. PRIOR to the clinic rotation, the student should review the objectives for that specific clinic to understand what type of work will be done in that clinic. A review of any procedure and/or diagnosis should be done related to that clinic the evening before the rotation.
2. Complete your white medication sheet PRIOR to the rotation. Review the sheet; you may be able to administer these medications.
3. After reviewing the objectives, the student should determine at least ONE (1) learning goal for this clinic. Remember **goals must be measurable** and **goals must have a time frame**. Since this is about you, the student, you are the focus of the goal; therefore, you can start with “I will . . .” There should be at least one learning goal for each day of the rotation. The goal **MUST BE MORE SPECIFIC** than “Today I will learn about this clinic.” Please date each Learning Goal.
4. Some clinics have different areas for learning. If you worked in one specific area on the first day, you may ask to work in another area the next day. You should ask by saying that one of your learning goals for this clinic is something specific in the next area of the clinic. [Please note staff may request that you stay in the same area;

discuss this with your instructor.]

5. EACH DAY: Select one patient for study and learning from that clinic assignment. You will complete the Patient Profile, determine the interventions and teaching needed for that patient.
    a. EACH evening after the rotation, research one professional article related to the day's chosen patient and write a summary of that article. The conclusion should include how this information pertains to your patient (see How to Write a Summary of An Article).
    b. The research must be properly referenced. Appropriate journals are *The American Journal of Nursing, RN Magazine, Nursing 2025,* and *The Journal of Practical Nursing.* Appropriate websites include any source from the EBSCO database in the library or fadavis.com; www.accessdata.fda.gov ; cdc.gov or nih.gov. <u>The first page of each article should be attached.</u>
    c. Wednesday's and Thursday's Patient Profile and article summary are due the following Monday morning. TURN IN BOTH to the clinical instructor on Monday morning prior to 0900.
6. At the end of the rotation, you should
    a. Evaluate your goals. Did you meet them? How? If you did not, why not? What could you have done differently?
    b. Self-reflect on the care you gave to patients, how the patients/nurses/staff interacted, and your opinion of this clinic.
7. All writing must be neat and legible.

PROCESS: Using the Student Clinic Notes

1. Print your name, the clinic, and the date at the top of the page.
2. Write your measurable learning goal
3. Identify the chosen patient for study for each day. Write the patient's initials, age, sex, and chief complaint (CC) [why they came to the clinic]
4. Write the medical diagnosis
5. Write the home medications. Be sure to include the dosage, the route, and the frequency with each medication.
6. Identify the subjective symptoms.
7. Identify the objective signs.
8. Write your nursing interventions for this patient. At home, write the rationale for each action and underline the rationale. Nursing interventions should be listed in priority order.
9. Identify patient teaching that is needed and/or done. If teaching was done, please indicate it. If teaching was not done, please give a reason and state when it should be done.
10. After you have found your research article, attach a summary of the article. Write your evaluation.
11. Write your self-reflection.
12. Include your medication log (see information on blackboard)
13. Create a Reference Page—references used for any patient information and for article research should be included.
14. Place work in a Pocket Folder along with your medication log and turn in the following Monday a.m. by 0900. Please place your work in this order [10-point deduction from weekly clinic grade if you cannot follow instructions]:
    a. Cover Page
    b. White Med Sheet
    c. Student Clinic Notes
    d. Summaries attached to each Clinic Note
    e. References attached to each Clinic Note

f. Copy of First Page of Article attached to each Clinic Note
g. Med Log

After each is checked, the Chart Pack is returned to the student for safe keeping. Some chart packs may become a part of the Clinical Case Study and/or Care Plan and will not be returned to the student in these assignments.

The **<u>Completed Clinic Requirements</u>** should be turned in for review and grading by 0900 on the following Monday. Failure to turn in the chart pack/clinic notes by 0900 will result in a deduction from the paperwork/documentation evaluation grade

Additional points may be taken from the clinical grade if work is incomplete.

A student who is going to be absent on Monday MUST email the clinical instructor prior to 0900 to report that the chart pack/clinic note is not going to be turned in Monday by 0900 due to illness. On the first day back in class, the Chart Pack/clinic note must be turned in. Failure to notify the instructor OR failure to turn in the chart pack/clinic note upon the student's return to school will result in a deduction on the weekly paperwork/documentation evaluation

A delay in a didactic course for the day DOES NOT PROHIBIT meeting the 0900 Monday deadline (in other words, if a theory class is delayed by an instructor for some reason, the expectation will still be that the Chart Pack is turned in by 0900 Monday). Failure to do so results in the above deductions.

If a grade of "0" is reached for the weekly clinical course grade, that "0" will stand against the clinical average.

ASSIGNMENT POLICY—Clinicals

It is the responsibility of the student to be informed of class progress and assignments and come to clinical prepared to participate in patient care, to turn in any assignments due, and/or take the quiz or test scheduled. Students will be required to write Care Plans, Case Studies and Clinical Care Maps as part of the clinical experience. Information about the assignments will be posted to Blackboard.

Computer Checklist

History and Physical

Go to the NOTES tab located at the top of the screen->Select NOTE TYPE or SERVICE TYPE->Look for History and Physical

If you are still unable to find the H & P, you need to contact your instructor.

Do not utilize the H & P to fill in your ISBAR with information you did not receive from your nurse or patient

Be sure to READ all the way to the bottom. You may skip over any lab and radiology results as you will be looking at that later under the lab section.

At the bottom of the H & P is the Impression and Plan. This is where Physicians write what they believe is going on with the patient and will also write the plan for treatment

The H & P is documented within 24 hours of admission so be aware these diagnoses can change and more may be added. This is why you will be looking next at the PROGRESS NOTES for changes that have occurred since admission.

Progress Notes

- Go to the NOTES tab located at the top of the screen->Select NOTE TYPE or SERVICE TYPE->Look for Physician Progress Notes
- There is typically a progress note for every day of the patient's stay during this admission. You should read at least the first and last progress note. If, when reading the progress note, you do not know how several diagnoses have changed or been added, you can skip back and read more of the progress notes.
- Again, you must read all the way to the bottom. At the bottom, you will find the Impression and Plan.

Use this information to fill in your ISBAR with current and past medical diagnoses. Also, fill in what is happening now. You can also see if they are planning discharge.

MAR

1. Get your White Medication Sheet from the chart pack.
2. Fill in the medication name, route, dose, frequency, and times.
   This is not the time to fill in classification, indication, side effects, and V/S needed- that is for research.
3. For Scheduled medications you will need to right click on the MAR tab located at the top of the screen->Select SCHEDULED MEDICATIONS->Right click on medication->Look at order detail. This should show you the times that the medication is scheduled. Be aware that if the med is BID- you are looking for 2 times, TID- 3 times, etc....
4. To look at continuous medications repeat steps located above and instead of selecting SCHEDULED you will select CONTINUOUS. Repeat for the PRN medications.
5. You only need to fill in frequency for PRN medications, not times because they are not scheduled at set times.

Example of Scheduled vs. PRN:

Medication	Classification	Indication	Dose/route	Frequency/time	Side effects	v/s
Furosemide (Lasix)			20 mg PO	Daily 0900		
Acetaminophen (Tylenol)			500mg PO	Q4h PRN		

Orders

- Click on the orders tab located at top of the screen.
- Be sure to note any wound care, Ted Hose, SCDs, Oxygen, IV fluids, Accudatas, Diet, Fluid Restriction, Weight bearing restrictions, etc....

Flowsheets (Labs, Radiology, Nursing Plan of Care)

Click on the RESULTS REVIEW tab on top left hand side of the screen. This will bring up a chart that looks like:

	Labs 48 hours	Lab	Radiology	Nursing plan of care
Complete blood count				
Complete metabolic panel				
Point of Care				

- You will need to look at your patient's admission date and get your lab sheet from your chart pack. Fill in the labs from the date of admission.
- Then look at the most current labs and fill those labs in on the next column. You need to write this information in black ink.
- DO NOT write in the normal values or draw your high or low arrows in blue or red at this time. This is for you to do at home as research.
- Be sure to look at the left hand column (Hematology, Chemistry, etc.) You can toggle through the labs using this column.
- Make sure to note any Microbiology. This is where you will find cultures such as blood cultures, urine cultures, and wound cultures.
- If your patient has accuchecks, you will find them in the MAR
- Next click the RADIOLOGY/IMAGING tab
- Get your diagnostics paper from your chart pack and fill in any x-rays, MRI, US results from the current admission

COMPUTER USAGE AT CLINICAL AGENCIES:

Clinical Computer Usage: Computer systems at the clinical sites are for clinical work. Students may only use the agency computer systems for accessing important patient data students need for safe and effective patient care. **Students MAY NOT use the agency computer for personal usage such as checking emails (even SPC or instructor sent emails are prohibited on agency computers), Blackboard, websites (including drug or diagnoses websites) or other personal usage. No "research" is to be done during the clinical period**. Students who engage in inappropriate computer usage will be placed on probation for the first offense and dismissed from the VNP for a subsequent offense.
Refer to the Student Vocational Nurse Handbook.

As computer technology in the field of health occupations continues to become more popular, computers may be used in this course for Case Studies and Care Plans if the student chooses to use them. All students have access to computers and printers on the South Plains College campus. All registered students are supplied with a working email account from South Plains College.

COMPUTER LAB USAGE

The computer lab(s) on any campus may be used by students during scheduled opening hours or as assigned by an instructor. Printer paper will not be provided for students to print materials, but students may seek assistance from faculty or staff to request lab paper from the college if needed. Lack of computer paper is not an excuse for not completing assignments

GRADING POLICY

Students must earn an overall grade of 76 or better to pass this course, but have some specific grading criteria:

Final semester grades will be based on the following:

A. **Departmental Math Exam—**the student must pass the semester's departmental math exam by the third time with an 80 or better on the exam. Students who do not achieve an 80 by the third testing fail the clinical course and are administratively withdrawn at that time, regardless of other grades. Students will not pass medications until this exam is passed.

B. **Weekly Clinical Evaluation**—students will receive a weekly clinical evaluation based on the student's individual clinical performance and preparedness to practice nursing.

C. **Paperwork/Documentation Evaluation**: All work must be turned in complete by the deadline according to the schedule. If work is not turned in, the grade is a zero, however, the work must still be completed and turned in for the student to exit the course. This includes but is not limited to ATI; Patho forms and care plans, concept maps, case studies, worksheets, and clinical quizzes as assigned.

D. **Completion of Skills Checklist to 90% and Performance of sterile skills**—four weeks prior to graduation, the student must have completed 90% of the skills checklist and must have performed the sterile procedures at least once to graduate. Students who fail to complete 90% of the checklist OR who fail to complete a sterile skill, fail the clinical course, regardless of other clinical grades.

E. **CPR and Immunizations—**CPR and immunizations must be kept current. If CPR expires or if an immunization booster/update is required, the student may not attend clinicals, accruing absences. Should this put the student over the allowable absences, the student will fail the clinical course, regardless of other grades. If the student misses one day due to an expired CPR or immunization, that student will have to make up that day in the clinical setting. IT IS THE RESPONSIBILITY OF THE STUDENT TO MAINTAIN CPR AND IMMUNIZATIONS.

F. **Summative Evaluation—**at the end of the semester, the student will have a summative evaluation that states if the student met all expectations of the clinical experience. The student must have completed all assignments, remediation, clinical experiences, and make-up days to have a successful summary.

GRADING SCALE:

90-100 = A
80-89 = B
76-79 = C
70-75 = D
<76 = F

Please note clinical grades are reported as whole numbers; decimals are dropped and are not rounded up.

GRADE BREAKDOWN

Weekly Clinical Evaluations: 60%
Paperwork/Documentation Evaluation, Quizzes, Assignments, other: 40%

COMMUNICATION POLICY

Electronic communication between the instructor and students in this course will utilize the South Plains College Blackboard and email systems. The instructor will not initiate communication using private email accounts. Students are encouraged to check SPC email regularly. Students will also have access to assignments, web-links, handouts, and other vital material which will be delivered via Blackboard. Any student having difficulty accessing the Blackboard or email should immediately contact the correct personnel.

Email Policy:

A. Students are expected to read and, if needed, respond in a timely manner to college e-mails. It is suggested that students check college e-mail daily to avoid missing time-sensitive or important college messages. Students may forward college e-mails to alternate e-mail addresses; however, SPC will not be held responsible for e-mails forwarded to alternate addresses.
B. Students' failure to receive or read official communications sent to their assigned e-mail address does not absolve them from knowing and complying with the communication's content.
C. The official college e-mail address assigned to students can be revoked if it is determined students are utilizing it inappropriately. College e-mail must not be used to send offensive or disruptive messages nor to display messages that violate state or federal law.
D. Instructors make every attempt to respond to student emails *during regular college business hours* when faculty are on campus. Instructors *are not* required to answer emails after hours or on weekends.
E. Students who use email inappropriately will be placed on probation for the first offense; and dismissed from the program for a second offense.
F. When contacting faculty, please use the SPC email and NOT blackboard messaging.

Texting Faculty: Students should not text faculty via the faculty cell phone. Written communication should be by email, office phone, or personal notes. The faculty cell phone is for contact during the clinical hours ONLY and should not be used outside the clinical experience. Students who text faculty will be placed on probation for the first offense and dismissed from the program for the second offense.

Cell Phones: cell phones are PROHIBITED at any clinical setting, Simulation and during Zoom meetings. Students should not have cell phones on their person, in their back packs, pockets or other personal areas during clinicals. Cell phones should be left in the student vehicle so there is no temptation to use them. Students who violate this policy and have their cell phone out during the clinical day for any reason will be sent home as absent—no matter when the infraction is discovered. If this absence causes the student to exceed the allowable absences, the student fails the clinical course, regardless of other clinical grades. This is considered a professional violation. Please refer to the Student Handbook for more information

Incidents/Investigative Reports/Generic Screens; for our purposes, the words Incident Report will be used.

An Incident Report shall be completed for the following:

a. Any injury that occurs to a student during clinical experience.
b. Any patient occurrence.

In the event of unusual occurrences involving students, employees of the clinical facility, patients and/or visitors, the following procedure should be followed:

a. Notify the program coordinator or instructor.
b. Notify the nurse in charge of the clinical area where the incident occurred.
c. Complete the clinical form with the assistance of an instructor and/or TPCN.
d. Complete the SPC incident report form documenting the event for SPC records.

1. An unusual occurrence includes but is not limited to incidents such as medication errors, patient injury witnessed by a student, and student injury.
2. Students who become ill or injured should contact the instructor immediately.
3. Students who choose to use the facility's emergency services will be required to pay for Emergency Room services and then file with SPC insurance and/or their own insurance carrier.
3. Students who are injured to the extent they cannot meet clinical objectives must withdraw from the VNP and apply for readmission once the injury has healed and the student can meet the objectives.

4. Student Exposure Incidents: Should a student of the VNP have an exposure to blood or body fluids through needle stick or other means, the student should do the following:
   a. Wash the wound with warm, soapy water <u>immediately</u>. If the splash is to the eyes, the eyes should be rinsed with clear water or normal saline.
   b. Notify the instructor as soon as possible.
   c. Call the facility's Employee Health department and give the following information. (The instructor should assist with this phone call.)
      1) name, room number and medical record number of source of exposure
      2) physician's name
      3) state "I have had an exposure through…."
      4) phone number of student
5. Student Vocational Nurses DO NOT report to the facility's employee health (we are not employees).

Laboratory Experiences

Proficiency Labs: Students must remain proficient in all nursing skills.
Level III competency will cover all previously mastered Level I and Level II skills in a timed setting.

Leaving the Clinical Unit

To avoid the charge/appearance of patient abandonment, students leaving the clinical setting will follow the rules of good conduct expected of Vocational Nurses:

If the student must leave the unit for any reason (including end of the shift), the student must:

1. Notify the nurse in charge or other designated licensed nurse and give report to the nurse.
2. Contact the Vocational Nursing instructor if it is necessary to leave the clinical site before the assigned hour to leave.
3. Not visit patients (this includes relatives) or other students on other units while in clinical practice. *Students who visit friends/relatives <u>after</u> clinical should be out of uniform.*
4. Students who leave the floor without authorization and without reporting off appropriately will come under full disciplinary action which could include dismissal from the VNP.

Limitations for Students in the Clinical Setting

Students are expected to know and follow the Scope of Practice for LVNs and SVNS and facility policies. There are some skills and procedures that are dictated by facilities as to who can perform them and under what circumstances. Students will be able to perform additional skills in this level and in Level 3.

Vocational Nursing Students <u>**cannot**</u> perform the following procedures:

1. Start an IV, prepare or administer IV medications such as IV piggyback, IV push, or chemotherapy drugs, blood, or blood products.
2. Perform IV site care or change IV dressings on central lines.
3. Take report on patients transferred from critical care areas or the recovery room.
4. Remove or shorten surgical drains.
5. Take any physician's orders verbally or by telephone.
6. Take CVP readings.
7. Adjust the angle of flexion or CPM apparatus.
8. Remove hemovac, JP, or T-tube.

9. Remove fecal impactions.
11. DC chest tubes or central lines
12. Insert NG tubes.
13. Photocopy ANY part of the patient record!!!

Once students have completed the specific classroom course AND/OR lab, they can do the following procedures with a written physician's order and always with supervision:

1. Prime a peripheral IV bottle or bag after successful completion of IV Therapy lab.
2. Discontinue peripheral IVs.
3. Perform venipuncture after venipuncture lab at Arthritis Associates or Cardiology Clinic at TTUHSC (not at UMC or CHS facilities) if they meet the IV therapy course criteria and have faculty approval.
4. Administer medications or do procedures involving medications after satisfactory completion of the medication administration rotation. This includes suppositories, eye and ear instillations, and tube feedings which have medications in the formula.
5. Discontinue N/G tubes after skills lab with instructor supervision.
6. Remove staples after skills lab *always with instructor supervision.*
7. Perform tracheotomy suctioning and care after successful completion of skills lab in ICU with TPCN supervision.
8. N/G irrigation and tube feedings after skills with instructor supervision.
9. Perform bladder irrigation and bladder scans.
11. Perform wet-to-dry dressings (but NO packing)
12. Remove sutures at Ambulatory Clinics ONLY (not at UMC or CHS facilities) always with nurse supervision
13. Perform EKGs at Ambulatory Clinics
14. Perform other skills as noted in specific clinical objectives.

It is the student's responsibility to ensure that there is adequate supervision for these skills

Safe Clinical Practice

Students are expected to demonstrate growth in clinical practice through application of knowledge and skills from previous and concurrent courses, to demonstrate growth in clinical practice as they progress through courses, to meet clinical expectations outlined in this syllabus, and to prepare for clinical practice in order to provide safe, competent care.
The purpose of this educational program is to make safe, effective vocational nurses. This aim is achieved through various theories, lab, simulation, and clinical experiences. Clinical supervision is provided by professional nursing educators to assure as much safety for the patients as possible.

Students who engage in unsafe nursing practice, either by omission or commission of acts, may be withdrawn from the nursing program, regardless of whether actual harm to a patient occurred, depending on the situation. The determination will be made by the VESC. This determination is the potential harm to the patient from a student's action or inaction. In most cases, students are given opportunities to improve; however, **a deliberate act of unsafe nursing practice (such as lying about patient care practices) is grounds for immediate dismissal.**

Smoking in Clinical Setting

There is NO SMOKING for students at any clinical site! Violation of the smoking policy is grounds for dismissal from the VNP.

Telephone Calls in the Clinical Setting

PROCEDURE:

1. If an emergency arises, the student's family MUST call the number given to them at the beginning of the clinical rotation. A message will be relayed to the student in clinicals. **However, there may be times that no one is available to take the emergency message. Students should arrange with other adults to act on their behalf for emergencies!**
3. **It is the student's responsibility to inform family members and ensure this policy is followed.** The clinical facilities do not have access to your records or schedules and will not be able to assist your family members in locating you!
4. When answering the phone on a unit, be courteous at all times. When you answer the phone, you must identify the unit, your name, and your title.
   Example: "East 5, Sue Smith, Student Vocational Nurse."
5. If you are able to answer the request, please indicate to the caller that you will do the request and complete that request as soon as possible.
6. If you are unable to answer a request, refer the matter to the charge nurse. Be sure to explain any delays to the person calling.
7. **NEVER** give out patient information over the phone, take a doctor's order, lab reports, reports from critical care or surgery, pre-op orders from surgery. **NEVER** phone the physician for orders or to give lab results.

Unprepared Students (for Nursing Care)

Students must research patient care information prior to the clinical experience and during the clinical experience to assure safe and therapeutic patient-centered care.

Unprepared Criteria:

1. A student who does NOT have clinical objectives, syllabus, and/or student handbook with him/her is unprepared. These documents assist the student in knowing clinical expectations, school policies, etc.
2. A student is not prepared who:
   a. cannot discuss the nursing report.
   b. has not assessed his/her patient and begun giving care.
   c. is not assisting a TPC nurse with patient care.
   d. is not ready to perform procedures on the unit.
   e. cannot discuss the plan of care.
   f. does not have required research
   g. has not read the unit objectives and knows what to do on that unit
3. A student who fails to follow up with instructor instructions in the clinical setting is unprepared. For example, if an instructor tells the student to add more information to the student research, and the student chooses not to add the information, then the student is unprepared.
4. A student who does not meet previous level objectives is unprepared.

As a student progresses, he/she is expected to understand and relate more of the data to the disease process. For example, a student in the third semester who could not perform and discuss the assessment (a first semester skill) would be considered unprepared.

A student is evaluated with the same expectations as other students at the same level.

Students who are unprepared are unsafe. **Unsafe students are sent home absent.**

Time Management of Clinical Day

Clinical Day 1

Time Frame: **Task/Skill/Activity**

0645-0715 Go with Assigned Nurse for Report

Note: Name, age, physician, diagnoses, safety level, allergies, code status, voiding/BM status, activity, diet, oxygen, incisions/wounds/drains, IV sites-solutions, rates; Ordered tests, results from previous tests, Accudatas on diabetics

Choose Patient(s)

a) Decide which patient(s) you will care for
b) Introduce yourself to the staff and identify your role as a student vocational nurse and let them know what care you will be providing. (Will change depending on semester).
c) Make beginning entry in nurses' narrative ex. - Report received, Care assumed of ____year old ________(gender) admitted with _______ (diagnoses) under the care of Dr. _____(physician's name). Resting in bed, eyes closed, respiration even and unlabored. (a note to show that you actually saw the patient(s) at this time and that they are alive)

0715-0900 Assessment, AM Care

a) Complete Head to toe assessment
b) Inform TPCN/Instructor and PCA of vital signs
c) Inform TPCN/Instructor of any abnormalities noted in the assessment
d) Document Head to toe assessment
e) Start the Activity/I&O sheet
f) Complete the ISBAR with information gathered from report

If you did not receive certain information in the report that is needed to complete the ISBAR, you need to ask the patient/TPCN

You should be talking to your patients as you are performing a head-to-toe assessment.

g) Set up meal tray for patient(s) and assist with breakfast if applicable
h) Once your patient is taken care of, you may help out on the unit by answering call lights and helping other students and nurses.

*** Be aware if you are standing around at the nurse's station, you will be required to answer call lights. It is recommended that you document your assessment in the patients' room so that it will be completed by 0930.

i) Complete AM care- oral care, bathing, grooming, ROM, linen change
j) Get on computer to look up History and Physical in order to complete any missing information of the ISBAR that you were unable to collect from the nurse or the patient ***This is not the time to gather information for Research!

***Assessment must be completed and documented prior to getting on the computer.

0900-0930 Seek instructor to present information

a) The following must be completed by 0930:
   - Head to toe assessment documented
   - Braden Scale Completed
   - ISBAR completed
   - Activity and I&O sheet initiated
b) Be prepared to give report about your patient(s)

***If the instructor is busy with another student, you should give the required materials to the instructor so she can see the information is completed even though she may not be able to go over it with you at the time. It is not the instructor's responsibility to find you to get your information.

c) Update Charts (must chart at least every 2 hours in nurse's narrative and Activity Sheet)
d) Look at orders: Note orders that will affect your care.
   Ex.- TEDs, SCDs, Dressing changes, Diet, Fluid Restrictions, Accudatas…

1000-1100 Finish up AM care
Follow the nurse
Assist with other patient care activities
Update Charts

1100-1130 Take vital signs and report to the TPCN and PCA
If patient lunch is available, help set up or assist with lunch as needed

1130 (Time may vary due to patient care responsibilities) Lunch-
30 Minutes total time. Report to TPCN before leaving to lunch

1200-1300 Check on patient(s), update charts, activity, and I&O sheet
Assist with patient activity

1300-1330 Get on the computer and gather information for research.

***Patient care is priority. This should take no longer than 30 minutes. This time is only for gathering information from the chart. Medication sheet: Medication, dose, route, frequency, times; Labs: only the lab results, do not fill in normal ranges, etc. Write in black pen. At home, you complete the rest for research. See Computer checklist.

1330-1430 Answer call lights
Follow nurse
Be sure room is clean
Fresh water is given if pt. is not NPO
You should do a check on your patient(s) at least every 2 hours for pain, toileting, positioning, and safety checks
Ask Instructor/TPCN to sign off on any completed skills
*For level 2 and 3, after PSCCL- Do medication teaching with patient.

1430-1500 Empty Foleys, make sure patient is clean and dry, room is clean, trash cans are not full, fresh water is available, Update activity sheets and total I&Os,
Report off to TPCN and make "Care Relinquished" ending note in narrative.

1515 Leave the unit and go clock out
*Do not leave the unit until 1515. Do not camp out in the breakroom waiting for the clock to turn 1515.

Clinical Day 2

Time Frame: **Task/Skill/Activity**

0645-0715 Go with Assigned Nurse for Report

Note: Name, age, physician, diagnoses, safety level, allergies, code status, voiding/BM status, activity, diet, oxygen, incisions/wounds/drains, IV sites-solutions, rates; Ordered tests, results from previous tests, Accudatas on diabetics (any changes from day 1?)

Choose Patient(s) if your patient went home:

a) Decide which patient(s) you will care for
b) Introduce yourself and identify your role as a student vocational nurse to the staff and let them know what care you will be providing. (Will change depending on semester)
c) Make beginning entry in nurses' narrative
ex. - Report received, Care assumed of ____year old ________(gender) admitted with _______(diagnoses) under the care of Dr. _____(physician's name). Resting in bed, eyes closed, respiration even and unlabored. (a note to show that you actually saw the patient(s) at this time and that they are alive)

0715-0900 Assessment, AM Care

a) Complete Head to toe assessment
b) Inform TPCN/Instructor and PCA of vital signs
c) Inform TPCN/Instructor of any abnormalities noted in the assessment
d) Document Head to toe assessment
e) Start the Activity/I&O sheet
f) Complete the ISBAR with information gathered from report. If you did not receive certain information in the report needed to complete the ISBAR, you must ask the patient.

<u>If giving meds</u>:
Inform TPCN and ask her to pull your medications from the pyxis/omnicell
Check the chart to find any new med orders and any labs that are needed for meds you are giving.
Seek out instructor to let her know when you are ready to give your meds. Assessment should still be complete and documented prior to giving your medications.

You should be talking to your patients as you are performing a head-to-toe assessment.

g) Set up the meal tray for patient(s) and assist with breakfast if applicable
h) Once your patient is taken care of, you may help on the unit by answering call lights and helping other students and nurses.

*** Be aware that if you are standing around at the nurse's station, you will be required to answer call lights. It is recommended that you document your assessment in the patients' room so it will be completed by 0930.

j) Complete AM care- oral care, bathing, grooming, ROM, linens

k) Get on computer to look up History and Physical and progress notes and to complete any missing information of the ISBAR that you were unable to collect from the nurse or the patient

***This is not the time to gather information for Research!

***Assessment must be completed and documented prior to getting on the computer.

0900-0930 Seek instructor to present information

a) The following must be completed by 0930:

Head to toe assessment documented

Braden Scale Completed

ISBAR completed

Activity and I&O sheet initiated

b) Be prepared to give report about your patient(s)

***If the instructor is busy with another student, you should give the required materials to the instructor so she can see the information is completed even though she may not be able to go over it with you at the time. It is not the responsibility of the instructor to come and find you in order to get your information.

c) Update Charts (must chart at least every 2 hours in nurse's narrative and Activity Sheet)

d) Look at orders: Note orders that will affect your care.

Ex.- TEDs, SCDs, Dressing changes, Diet, Fluid Restrictions, Accudatas

1000-1100	Finish up AM care Follow the nurse Assist with other patient care activities Update Charts
1100-1130	Take vital signs and report to the TPCN and PCA If patient lunch is available, help set up or assist with lunch as needed
1130 (Time may vary due to patient care responsibilities)	Lunch- 30 Minutes total time. Report to TPCN before leaving to lun
1200-1300	Check on patient(s), update charts, activity, and I&O sheet Assist with patient activity
1300-1430	Answer call lights Follow nurse Be sure room is clean Fresh water is given if pt. isn't NPO You should do a check on your patient(s) at least every 2 hours for pain, toileting, positioning, and safety checks Ask TPCN to sign off on any completed skills

1430-1500	Empty Foleys, make sure patient is clean and dry, room is clean, trash cans are not full, fresh water available, Update activity sheets and total I&Os, Report off to TPCN and make "Care Relinquished" ending note in nurse's narrative.
1515	Leave the unit.

Witnessing Documents

Student Vocational Nurses do not witness legal documents, such as a surgical permit, blood permit, etc. While the student may be present during the discussion, the student must make clear to physicians and staff that the student will NOT be able to sign the legal document as a witness.

Also, Student Vocational Nurses cannot interpret informed consent for any legal document. Informed consent (surgical permits, blood permits, etc.) requires the patient fully understand and agree to the procedure based on the explanation from the physician. Because there is room for error in translating from one language to another, only certified interpreters should perform this service. It is acceptable practice to interpret during routine nursing procedures, but not for legal purposes.

STUDENT CONDUCT—Please refer to the Student Vocational Nursing Handbook for all Program Rules & Policies

Rules and regulations relating to the students at South Plains College are made with the view of protecting the best interests of the individual, the general welfare of the entire student body and the educational objectives of the college. As in any segment of society, a college community must be guided by standards that are stringent enough to prevent disorder, yet moderate enough to provide an atmosphere conducive to intellectual and personal development.

A high standard of conduct is expected of all students. When a student enrolls at South Plains College, it is assumed the student accepts the obligations of performance and behavior imposed by the college relevant to its lawful missions, processes, and functions. Obedience to the law, respect for properly constituted authority, personal honor, integrity, and common sense guide the actions of each member of the college community both in and out of the classroom. Students are subject to federal, state and local laws, as well as South Plains College rules and regulations. A student is not entitled to greater immunities or privileges before the law than those enjoyed by other citizens. Students are subject to such reasonable disciplinary action as the administration of the college may consider appropriate, including suspension and expulsion in appropriate cases for breach of federal, state or local laws, or college rules and regulations.

This principle extends to conduct off-campus which is likely to have adverse effects on the college or on the educational process which identifies the offender as an unfit associate for fellow students.
Any student who fails to perform according to expected standards may be asked to withdraw.
Rules and regulations regarding student conduct appear in the current Student Guide and in the Vocational Nursing Student Handbook.

If you are experiencing any of the following symptoms, please do not attend class and either seek medical attention or test for COVID-19.

- Cough, shortness of breath, difficulty breathing
- Fever or chills
- Muscles or body aches
- Vomiting or diarrhea
- New loss of taste and smell

Please also notify DeEtte Edens, BSN, RN, Associate Director of Health & Wellness, at dedens@southplainscollege.edu or 806-716-2376. Proof of a positive test is required. A home test is sufficient, but students must submit a photo of the positive result. The date of the test must be written on the test result and an ID included in the photo. If tested elsewhere (clinic, pharmacy, etc.), please submit a copy of the doctor's note or email notification. Results may be emailed to DeEtte Edens, BSN, RN at dedens@southplainscollege.edu.

A student is clear to return to class without further assessment from DeEtte Edens, BSN, RN if they have completed the 3-day isolation period, symptoms have improved, and they are without fever for 24 hours without the use of fever-reducing medication.

Students must communicate with DeEtte Edens, BSN, RN prior to their return date if still symptomatic at the end of the 3-day isolation.

Please immediately notify your instructor, the program director, and DeEtte Edens (Associate Director of Health and Wellness) any time you test positive for COVID-19. dedens@southplainscollege.edu or 806-716-2376.

ACCOMMODATIONS

South Plains College Syllabus Statements: Intellectual Exchange, Disabilities, Non-Discrimination, Title IX, CARE Team, Campus Concealed Carry (https://www.southplainscollege.edu/syllabusstatements/)

FOUNDATION SKILLS

BASIC SKILLS–Reads, Writes, Performs Arithmetic and Mathematical Operations, Listens and Speaks

F-1 Reading–locates, understands, and interprets written information in prose and in documents such as manuals, graphs, and schedules.
F-2 Writing–communicates thoughts, ideas, information, and messages in writing and creates documents such as letters, directions, manuals, reports, graphs, and flow charts.
F-3 Arithmetic–performs basic computations; uses basic numerical concepts such as whole numbers, etc.
F-4 Mathematics–approaches practical problems by choosing appropriately from a variety of mathematical techniques.
F-5 Listening–receives, attends to, interprets, and responds to verbal messages and other cues.
F-6 Speaking–organizes ideas and communicates orally.

THINKING SKILLS–Thinks Creatively, Makes Decisions, Solves Problems, Visualizes and Knows How to Learn and Reason

F-7 Creative Thinking–generates new ideas.

F-8 Decision-Making–specifies goals and constraints, generates alternatives, considers risks, evaluates, and chooses the best alternative.

F-9 Problem Solving–recognizes problems, devises, and implements plan of action.

F-10 Seeing Things in the Mind's Eye–organizes and processes symbols, pictures, graphs, objects, and other information.

F-11 Knowing How to Learn–uses efficient learning techniques to acquire and apply new knowledge and skills.

F-12 Reasoning–discovers a rule or principle underlying the relationship between two or more objects and applies it when solving a problem.

PERSONAL QUALITIES–Displays Responsibility, Self-Esteem, Sociability, Self-Management, Integrity, and Honesty

F-13 Responsibility–exerts a high level of effort and perseveres towards goal attainment.

F-14 Self-Esteem–believes in own self-worth and maintains a positive view of self.

F-15 Sociability–demonstrates understanding, friendliness, adaptability, empathy, and politeness in group settings.

F-16 Self-Management–assesses self accurately, sets personal goals, monitors progress, and exhibits self-control.

F-17 Integrity/Honesty–chooses ethical courses of action.

SCANS COMPETENCIES

C-1 **TIME** - Selects goal - relevant activities, ranks them, allocates time, prepares and follows schedules.

C-2 **MONEY** - Uses or prepares budgets, makes forecasts, keeps records and makes adjustments to meet objectives.

C-3 **MATERIALS AND FACILITIES** - Acquires, stores, allocates, and uses materials or space efficiently.

C-4 **HUMAN RESOURCES** - Assesses skills and distributes work accordingly, evaluates performance and provides feedback.

INFORMATION - Acquires and Uses Information

C-5 Acquires and evaluates information.

C-6 Organizes and maintains information.

C-7 Interprets and communicates information.

C-8 Uses computers to process information.

INTERPERSONAL–Works with Others

C-9 Participates as a member of a team and contributes to group effort.

C-10 Teaches others new skills.

C-11 Serves Clients/Customers–works to satisfy customer's expectations.

C-12 Exercises Leadership–communicates ideas to justify position, persuades and convinces others, responsibly challenges existing procedures and policies.

C-13 Negotiates-works toward agreements involving exchanges of resources; resolves divergent interests.

C-14 Works with Diversity–works well with men and women from diverse backgrounds.

SYSTEMS–Understands Complex Interrelationships

C-15 Understands Systems–knows how social, organizational, and technological systems work and operate effectively with them.

C-16 Monitors and Corrects Performance–distinguishes trends, predicts impacts on system operations, diagnoses system performance and corrects malfunctions.

C-17 Improves or Designs Systems–suggests modifications to existing systems and develops new or alternative systems

to improve performance.

TECHNOLOGY–Works with a Variety of Technologies

C-18 Selects Technology–chooses procedures, tools, or equipment, including computers and related technologies.
C-19 Applies Technology to Task–understands overall intent and proper procedures for setup and operation of equipment.
C-20 Maintains and Troubleshoots Equipment–prevents, identifies, or solves problems with equipment, including computers and other technologies.

VNSG 2461 SYLLABUS CONTRACT

I have read the VSNG 2461 syllabus and understand the course requirements to become a successful, safe, and therapeutic nurse.

I understand the policies within the clinical syllabus, and I am responsible for following all policies contained within this syllabus and the Clinical Handbook

I have had the opportunity to ask questions.

I will comply with all rules and regulations found in this syllabus and the Student Vocational Nurse Handbook.
